This thesis presents several new insights on the interface between mathematics and theoretical physics, with a central role for Riemann surfaces. First of all, the duality between Vafa-Witten theory and WZW models is embedded in string theory. Secondly, this model is generalized to a web of dualities connecting topological string theory and $N=2$ supersymmetric gauge theories to a configuration of D-branes that intersect over a Riemann surface. This description yields a new perspective on topological string theory in terms of a KP integrable system based on a quantum curve. Thirdly, this thesis describes a geometric analysis of wall-crossing in $N=4$ string theory. And lastly, it offers a novel approach to construct metastable vacua in type IIB string theory.

This collection of images and essays originated at the acclaimed Gerrit Rietveld Academy in Amsterdam. Cities and Eyes Sourcebook presents the diverse work of the Academy's artists, philosophers, scholars, architects, and photographers as they explore the world's cities, including Amsterdam, London, New York, Paris, and São Paulo. Presented in both English and Dutch, and accompanied by an index that includes suggestions for further reading, Cities and Eyes Sourcebook will illuminate the world's greatest cities for a new audience of art lovers and urbanites alike.
