The two-volume set LNAI 12084 and 12085 constitutes the thoroughly refereed proceedings of the 24th Pacific-Asia Conference on Knowledge Discovery and Data Mining, PAKDD 2020, which was due to be held in Singapore, in May 2020. The conference was held virtually due to the COVID-19 pandemic. The 135 full papers presented were carefully reviewed and selected from 628 submissions. The papers present new ideas, original research results, and practical development experiences from all KDD related areas, including data mining, data warehousing, machine learning, artificial intelligence, databases, statistics, knowledge engineering, visualization, decision-making systems, and the emerging applications. They are organized in the following topical sections: recommender systems; classification; clustering; mining social networks; representation learning and embedding; mining behavioral data; deep learning; feature extraction and selection; human, domain, organizational and social factors in data mining; mining sequential data; mining imbalanced data; association; privacy and security; supervised learning; novel algorithms; mining multi-media/multi-dimensional data; application; mining graph and network data; anomaly detection and analytics; mining spatial, temporal, unstructured and semi-structured data; sentiment analysis; statistical/graphical model; multi-source/distributed/parallel/cloud computing.

Molecular Pathogenesis and Treatment of Chronic Myelogenous Leukemia provides a comprehensive understanding of the recent molecular genetics of Chronic Myelogenous Leukemia (CML) and a characterization of the molecular targets for drug development. Included are therapeutic implications, diagnosis, and prognosis for understanding and facilitating daily practice in the management of patients with CML. Understanding of the pathogenesis and therapy of hematological malignancies such as CML has grown significantly in recent years. This development owe much to the progress in molecular biology and now makes a major contribution to diagnosis and to treatment that pharmacologically targets the molecular events of CML. Molecular targeting therapy with newly developed agents such as small molecules and antibodies for hematological malignancies are being discovered after years of research. Some of these, including tyrosine kinase inhibitors such as imatinib, nilotinib, and dasatinib, lead to increased survival rates and improved therapies. With the opinion leaders of basic and clinical research in the field as authors, this book reviews recent advances in the biology of CML.

Hoewel enorm invloedrijk in Duitstalig Europa, heeft de conceptuele geschiedschrijving (Begriffsgeschichte) tot nu toe weinig aandacht in het Engels gekregen. Dit genre van intellectuele geschiedschrijving verschilt van zowel de Franse geschiedschrijving van mentalités als de Engelstalige geschiedschrijving van verhandelingen door het concept. Aan de hand van praktische voorbeelden in de geschiedschrijving wordt deze vorm toegelicht door Bram Kempers, Eddy de Jongh en Rolf Reichardt.

Hepatobiliary and Pancreatic Surgery meets the needs of surgeons in higher training and practising consultants for a contemporary and evidence-based account of this sub-specialty that is relevant to their general surgical practice. It is a practical reference source incorporating the most current information on recent developments, management issues and operative procedures. The text is thoroughly referenced and supported by evidence-based recommendations wherever possible, distinguishing between strong evidence to support a conclusion, and evidence suggesting that a recommendation can be reached on the balance of probabilities. For this Sixth Edition the authorship team across the series has been expanded to include additional European and World experts, with an increased emphasis on global practice. Throughout all six volumes the contents have been extensively revised in line with recently published evidence. Detailed supportive key references are provided and are also included within the comprehensive list of references in the accompanying ebook. Links to recommended online videos have been added where appropriate. The Companion to Specialist Surgical Practice series provides a current and concise summary of the key topics within the major sub-specialties of general surgery. Each volume highlights evidence-based practice both in the text and within the extensive list of references at the end of every chapter. This edition of Hepatobiliary and Pancreatic Surgery includes new chapters on pancreas, islet and liver transplantation. The text includes new treatment options such as radioembolization, antiangiogenics and ALPPS, the latest guidelines on HCC and colorectal liver metastases management with recent evidence on treatment of biliary tract cancer, pancreatic cystic lesions and complicated acute pancreatitis. Over half of the chapters have been re-written by new authors thus ensuring that this edition is fresh, relevant and incorporates the latest developments and most up-to-date evidence base.
