childhood sweetheart. A wedding dress sealed in a jar. A roll of undeveloped film. An axe used to chop an ex-lover's furniture in a fit of rage. A wind-up toy, a bar of bath soap, a tin of Love Potion with the simple caption "Doesn't work." These objects, and many more, make up the whimsical, imaginative, poignant population of the Museum of Broken Relationships. Started by two former lovers who wanted a way to commemorate their relationship even after it ended, who couldn't bear to simply throw away the objects that had once meant so much, the

Museum of Broken Relationships has captured hearts and imaginations around the globe since its founding in 2010. Anonymous submissions have poured in by the thousands: objects with brief, compelling captions confessing to the story behind their meaning. The museum's Croatian exhibit quickly became a main draw for tourists from around the globe, and has garnered enthusiastic, glowing media attention from sources as disparate as the New York Times and the Chinese national news. Now, as the physical museum arrives for a permanent spot in Los

A year after a devastating epidemic swept the world, Emily and her six-year-old son, Song, are struggling south in search of more hospitable climates. A snowstorm traps them in an abandoned gas station, where starving and desperate, they encounter Aaron, an Army medic on a mission of his own, who offers them a ride to ease the journey.

Livestock farming increasingly means much more than just food production and product quality is no longer simply synonymous with food safety and the provision of energy and protein nutrients. This book examines the variety of reasons for this shift in thinking and provides a basis for a new approach to livestock farming systems. The

topical issues for product quality based on local resources are addressed from a variety of angles, including genomics land use, the consumer preference and human nutrition. The book focusses on the following topics, using examples from all over the world: the current change in views and values on quality of animal products; the specificity of traditional dairy and meat products and the technology of processing; the role of local breeds and traditional livestock farming systems in today's society; the search for local avenues for sustainable development of livestock farming systems. The book serves as a reference point for scientists, practitioners in the livestock industry, teachers and students in animal sciences, national and international

*Plug-in electric vehicles are coming. Major automakers plan to commercialize their first models soon, while Israel and Denmark have ambitious plans to electrify large portions of their vehicle fleets. No technology has greater potential to end the United States' crippling dependence on oil, which leaves the nation vulnerable to price shocks, supply disruptions, environmental degradation, and national security threats including terrorism. What does the future hold for this critical technology, and what should the U.S. government do to promote it? Hybrid vehicles now number more than one million on America's roads, and they are in high demand from consumers. The next major technological step is the plug-in electric vehicle. It combines an internal combustion engine and electric motor, just as hybrids do. But unlike their precursors, PEVs can be recharged from standard electric outlets, meaning the*

*vehicles would no longer be dependent on oil. Widespread growth in the use of PEVs would dramatically reduce oil dependence, cut driving costs and reduce pollution from vehicles. National security would be enhanced, as reduced oil dependence decreases the leverage and resources of petroleum exporters. Brookings fellow David Sandalow heads up an authoritative team of experts including former government officials, private-sector analysts, academic experts, and nongovernmental advocates. Together they explain the current landscape for PEVs: the technology, the economics, and the implications for national security and the environment. They examine how the national interest could be served by federal promotion and investment in PEVs. For example, can tax or procurement policy advance the cause of PEVs? Should the public sector contribute to greater research and development?*

*Should the government insist on PEVs to replenish its huge fleet of official vehicles? Plug-in electric vehicles are coming. But how soon, in what numbers, and to what effect? Federal policies in the years ahead will go a long way toward answering those questions. David Sandalow and his colleagues examine what could be done in that regard, as well as what should be done.*

A growing number of JMIC students have begun to incorporate replicable research design into their theses. This distillation of Master Sergeant Folker's theses shows how fruitful this approach can be. By taking advantage of on-site research funds available from the College, he managed, in brief visits to four Unified Command Joint Intelligence Centers, to carry out a controlled experiment to measure the impact of analyst familiarity with and use of one structured analytic technique hypothesis testing. His

findings, if corroborated by follow-on studies, could have a substantial impact on Intelligence Community analytical practices, and even some influence on how senior policy officials react to analytical products. Managers of analytical personnel might also note that structured methods would appear, from this study of non-specialized joint intelligence center analysts, to be useful to specialized analysts who may be required to move beyond their areas of deep expertise to cover new or unfamiliar assignments. Translated by Derek and Inge Jordan In Children of the Future, Wilhelm Reich shows how disastrous the exclusion of genitality is to the young and its important influence on their development. terms of what he sees as the real meaning of the sexual enlightenment of youth: it is not the mystery and dangers of procreation, but the essential nature of sexuality and the right of youth to genital gratification. Reich presents a new way of seeing the parental compulsion to teach. In other chapters, Reich examines attitudes toward infantile masturbation, the source of the human no, and special disturbances of the young. Reich's work is substantiated by his concrete observations and experiences with children, including case studies from the Orgonomic Infant Research Center.

*and shape our environment." From the foreword by Stewart L. Udall Published in cooperation with the Center for American Places, Harrisonburg, Virginia A Quest for Life is the autobiography of a man who stands alongside Rachel Carson, Lewis Mumford, and Aldo Leopold as one of the giants of the environmental movement. In a robust and singular voice, Ian McHarg recounts the story of a life that has foreshadowed and eventually shaped environmental consciousness in the twentieth century. Along the way we meet prominent figures in the environmental movement, the design fields, and the government, from Walter Gropius to Lady Bird Johnson, all presented in rich and telling anecdotes. *Quest for Life* McHarg presents us with an arresting image. Describing the view from his boyhood home on the outskirts of Glasgow, he tells us that in one direction he could see the industrial miasma of smokestacks, tenements, and treeless streets, and, in another, the glories of the Scottish countryside. "I was born and bred," he writes, "on a fulcrum with two poles, city and countryside." Confronted with such a stark contrast, the man who was to become "the founder of ecological planning" began at an early age to turn literally from inhumane urban development and toward the beauty and power of Nature. Each chapter of this book illuminates key stages in McHarg's life and in the evolution of his

We see him as a youth standing on a hillside beside the impressive Donald Wintersgill who, with the wave of his cane, lays out an entire village complete with lakes and forests, and thus introduces the astonished McHarg to the profession of landscape architecture. In some of the bloodiest battles of the Second World War he witnesses the magnitude of human destructive capability. Later, when he faces a crisis of conscience over his religious training and its exhortation to gain dominion over life and subdue the earth, he begins to develop a deep spiritual appreciation for the sanctity of Nature itself. It offers fresh insight into the revolutionary design method behind his groundbreaking book, Design with Nature, and explores the development of geographical information systems. *It is an important early utopian work. The book is presented as a dialogue between "a Grandmaster of the Knights Hospitaller and a Genoese Sea-Captain". Inspired by Plato's Republic and the description of Atlantis in Timaeus, it describes a theocratic society where goods, women and children are held in common. One of the most significant aspects of this community is the distribution of work. Once again Campanella engages in an explicit polemic with Aristotle, who had excluded artisans, peasants and those involved in manual labor from the category of full citizenship and from the highest levels of virtue. In simple terms, we need to learn to use the world's rapidly depleting resources in a significantly more efficient manner. Practical and readily adopted solutions are needed now.
