

Animal Madness How Anxious Dogs Compulsive Parrots And Elephants In Recovery Help Us Understand Ourselves Laurel Braitman

CHERUB exists for the simplest of reasons: even a master criminal doesn't suspect that the kid next door is a spy. When CHERUB uncovers a link between eco-terrorist group Help Earth and a wealthy religious cult known as The Survivors, James Adams is sent to Australia on an infiltration mission. It's his toughest job so far. The Survivors' outback headquarters are completely isolated, and the cult's brainwashing techniques mean James is under massive pressure to conform. This time he's not just fighting terrorists. He's got to battle to keep control of his own mind. For official purposes, these children do not exist.

"A celebrated veterinary behaviorist describes the practice of One Medicine, which hinges on the belief that humans and other animals have minds that work the same way, experience similar emotions and share the same neurochemistry, "--NoveList.

Inspired by the New York Times and USA Today bestselling novel A Dog's Way Home by W. Bruce Cameron, now a major motion picture! Even though Bella has to hide from the neighbors and learn boring games like No Barks and Go Home, she loves her boy Lucas. Then one day Bella is picked up by Animal Control and Lucas is forced to send her to a foster home far away. Bella waits and waits for Lucas to come and get her, but days go by and he does not come. Finally Bella realizes what she needs to do—she needs to Go Home to Lucas—and even five hundred miles of dangerous Colorado wilderness won't get in her way. Bella's Story includes charming illustrations by Richard Cowdrey as well as a reading and activity guide at the end of the book. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

A masterful new translation by Michael Hofmann of some of Kafka's most fantastical and visionary short fiction Animals, strange beasts, bureaucrats, businessmen, and nightmares populate this collection of stories by Franz Kafka. These matchless short works, all unpublished during Kafka's lifetime, range from the gleeful dialogue between a cat and a mouse in "Little Fable" to the absurd humor of "Investigations of a Dog," from the elaborate waking nightmare of "Building the Great Wall of China" to the creeping unease of "The Burrow," where a nameless creature's labyrinthine hiding place turns into a trap of fear and paranoia.

Solving Separation Anxiety

The book begins with an educational theory guide, to help deepen your understanding of why your horse is acting the way he does and what his motivating factors are. Following the theory guide are over 77 Solutions for herd bound behavior. Included in these solutions are exercises divided into sections individualized to how your horse is kept; Stall, Pasture, Pair bonded, etc. It also includes strategies for riding, Emergency "In the moment" solutions and pages to record your progress on. These strategies can be used with each member of the herd, this is most valuable in situations where a single buddy horse is left behind. By using the exercises, programs and approaches you can create horses that are more self confident and able to be separated with more ease and relaxation. I am incredibly excited to get this information in the hands of horse lovers who struggle with this frustrating and destructive issue! There is nothing more peaceful then hearing horses munching on grass instead of screaming for their herd mate!

Handbook of Electrical Installation Practice covers all key aspects of industrial, commercial and domestic installations and draws on the expertise of a wide range of industrial experts. Chapters are devoted to topics such as wiring cables, mains and submains cables and distribution in buildings, as well as power supplies, transformers, switchgear, and electricity on construction sites. Standards and codes of practice, as well as safety, are also included. Since the Third Edition was published, there have been many developments in technology and standards. The revolution in electronic microtechnology has made it possible to introduce more complex technologies in protective equipment and control systems, and these have been addressed in the new edition. Developments in lighting design continue, and extra-low voltage luminaries for display and feature illumination are now dealt with, as is the important subject of security lighting. All chapters have been amended to take account of revisions to British and other standards, following the trend to harmonised European and international standards, and they also take account of the latest edition of the Wiring Regulations. This new edition will provide an invaluable reference for consulting engineers, electrical contractors and factory plant engineers.

Taking refuge in fairy tales after the loss of his mother, twelve-year-old David finds himself violently propelled into an imaginary land in which the boundaries of fantasy and reality are disturbingly melded. By the author of The Black Angel. 75,000 first printing.

Maira Kalman, with wit and great sensitivity, reveals why dogs bring out the best in us Maira Kalman + Dogs = Bliss Dogs have lessons for us all. In Beloved Dog, renowned artist and author Maira Kalman illuminates our cherished companions as only she can. From the dogs lovingly illustrated in her acclaimed children's books to the real-life pets who inspire her still, Kalman's Beloved Dog is joyful, beautifully illustrated, and, as always, deeply philosophical. Here is Max Stravinsky, the dog poet of Oh-La-La (Max in Love)-fame, and her own Irish Wheaton Pete (almost named Einstein, until he revealed himself to be "clearly no Einstein"), who also made an appearance in the delightful What Pete Ate: From A to Z. And of course, there is Boganch, Kalman's in-laws' "big black slobbering Hungarian Beast." And that's just the beginning. With humor and intelligence, Kalman gives voice to the dogs she adores, noting that they are constant reminders that life reveals the best of itself when we live fully in the moment and extend unconditional love. "And it is very true," she writes, "that the most tender, complicated, most generous part of our being blossoms without any effort, when it comes to the love of a dog."

The Natural History of Rabies

Infectious Madness

Science historian Laurel Braitman draws on evidence from across the world to show, for the first time, how astonishingly similar humans and other animals are when it comes to their emotional wellbeing. Charles Darwin developed his evolutionary theories by studying Galapagos finches and fancy pigeons; Alfred Russel Wallace investigated creatures in the Malay Archipelago. Laurel Braitman got her lessons closer to home by watching her dog. Oliver snapped at flies that only he could see, suffered from debilitating separation anxiety, was prone to aggression, and may even have attempted suicide. Braitman's experiences with Oliver made her acknowledge a startling connection: non-human animals can lose their minds. And when they do, it often looks a lot like human mental illness. Thankfully, all of us can heal. Braitman spent three years travelling the world in search of emotionally disturbed animals and the people who care for them, finding numerous stories of recovery: parrots that learn how to stop plucking their feathers, dogs that cease licking their tails raw, polar bears that stop swimming in compulsive circles, and great apes that benefit from the help of human psychiatrists. How do these animals recover? The same way we do: with love, medicine, and above all, the knowledge that someone understands why we suffer and what can make us feel better. PRAISE FOR LAUREL BRAITMAN [A] fascinating contribution to studies of animal behaviour [The Age [Braitman wants us to take animals seriously [to see them as individuals with life histories and psychologies as dramatic and intense as our own [[She] has an absolute, not a comparative, sense of the animal soul. [The New Yorker

Existentialisms arise when the foundations of being, such as meaning, morals, and purpose come under assault. In the first-wave of existentialism, writings typified by Kierkegaard, Dostoevsky, and Nietzsche concerned the increasingly apparent inability of religion, and religious tradition, to support a foundation of being. Second-wave existentialism, personified philosophically by Sartre, Camus, and de Beauvoir, developed in response to similar realizations about the overly optimistic Enlightenment vision of reason and the common good. The third-wave of existentialism, a new existentialism, developed in response to advances in the neurosciences that threaten the last vestiges of an immaterial soul or self. Given the increasing explanatory and therapeutic power of neuroscience, the mind no longer stands apart from the world to serve as a foundation of meaning. This produces foundational anxiety. In Neuroexistentialism, a group of contributors that includes some of the world's leading philosophers, neuroscientists, cognitive scientists, and legal scholars, explores the anxiety caused by third-wave existentialism and possible responses to it. Together, these essays tackle our neuroexistentialist predicament, and explore what the mind sciences can tell us about morality, love, emotion, autonomy, consciousness, selfhood, free will, moral responsibility, law, the nature of criminal punishment, meaning in life, and purpose.

It's a jungle out there. And survival is never a given. Somehow, a blind, defenseless tiger kitten must evolve into a deadly, efficient predator; a chimp must learn to distinguish edible plants from lethal poisons; a baby buffalo must be able to pick its mother out of a herd of hundreds. Contrary to common belief, not everything is "hardwired" -- or instinctual -- in the animal kingdom. Many skills a wild animal needs to thrive, to grow, to be what nature intended, must be developed through play, painstaking teaching, and often treacherous trial and error. The coming-of-age processes of the myriad creatures of plain, forest, ocean, and jungle are truly fascinating and often astonishing natural events. In Becoming a Tiger, Susan McCarthy, co-author of the critically acclaimed New York Times bestseller When Elephants Weep, offers readers an in-depth look into the amazing ways baby animals learn not only about themselves, but about their world and ours -- and how to survive in both. Based on extensive scientific research done in the lab, in controlled "natural" settings, as well as in the wild, her findings provide stunning new insights into the lives and development of Earth's nonhuman inhabitants -- not only tigers, but lions, bears, bats, rats, birds, dolphins, whales, apes, elephants, and dozens of other species. Sharing stories and discoveries at once captivating, funny, breathtaking, provocative, and heartwarming, Susan McCarthy carries us on a remarkable journey into untamed places, immersing us in the fascinating, complex, and hitherto unimagined societies and cultures of the beasts and birds. Along the way she shines a brilliant new light on subjects scientists, biologists, and zoologists have only begun to explore, revealing startling truths about the behavior, and sometimes humanlike foibles, of creatures great and small. Warm, informative, and beautifully written, Becoming a Tiger is an enthralling reading experience for animal lovers everywhere. In the transformation tales of playful pups, big-footed cubs, and scrawny chicks becoming deadly hunters, able foragers, and deft nest-builders are valuable and enriching life lessons for members of our own inquisitive, ever-developing species.

An honest and deeply moving debut memoir about a young woman's battle with depression and how her dog saved her life A New York Times Bestseller [Dog Medicine simply has to be your next must-read. [Cheryl Strayed At twenty-two, Julie Barton collapsed on her kitchen floor in Manhattan. She was one year out of college and severely depressed. Summoned by Julie's incoherent phone call, her mother raced from Ohio to New York and took her home. Haunted by troubling childhood memories, Julie continued to sink into suicidal depression. Psychiatrists, therapists, and family tried to intervene, but nothing reached her until the day she decided to do one hopeful thing: adopt a Golden Retriever puppy she named Bunker. Dog Medicine captures the anguish of depression, the slow path to recovery, the beauty of forgiveness, and the astonishing ways animals can help heal even the most broken hearts and minds.

Skinny Bastard

In Defence of Dogs

Treating Separation Anxiety In Dogs

What Animals Can Teach Us About Being Human

For every Skinny Bitch, there's a kick-ass man just as eager to take control of his weight and health. The New York Times bestselling authors now share their tips for turning Dad bods into Skinny Bastards. What's good for the bitch is good for the bastard. Hundreds of thousands of women have been inspired to "use their head" and get re-reading the best-selling manifesto Skinny Bitch. But it turns out some men have been reading over their girlfriends' shoulders. Professional athletes such as Milwaukee Brewers' Prince Fielder and the Dallas Mavericks' Jerry Stackhouse have adopted a whole new eating plan because of the book. Now authors Rory Freedman and Kim Barnouk have a book of their own. In Skinny Bastard, they'll explain why the macho "meat and potatoes" diet is total crap, why having a gut is un-cool (and a turn-off), and how to get buff on the right foods. Eating well shouldn't be a "girlie" thing-and the Bitches will whip any man into shape with their straight-talk, sound guidance, and locker room humor. This book provides essential worldwide reference information regarding rabies for public health officials, veterinarians, physicians, virologists, epidemiologists, infectious disease specialists, laboratory diagnosticians, and wildlife biologists. The book is divided into six main sections, covering topics such as the rabies virus, including antigenic and immunologic characteristics; pathogenesis, including the immune response to the infection, pathology, and latency; diagnostic techniques; rabies epidemiology in a variety of wild and domestic animals; rabies control, including vaccination of wild and domestic animals, as well as control on the international level; and finally a discussion of rabies in human beings, including treatment, and human post-exposure vaccination. Natural History of Rabies, First Edition has been the principal worldwide reference since 1975. The new Second Edition has been completely updated, providing current information on this historically deadly disease.

The true story of a voyage to the South Pacific in search of sperm whales. The Charles W. Morgan was the last surviving whaler from the fleet sailing out of New Bedford, Massachusetts. She was retired in 1921, after 80 years of active service. In this book, first published in 1948, Nelson Cole Haley recaptures the high drama of the whaling industry, the adventures of the shipmates, and their adventures ashore on the exotic islands of the South Pacific. "This classic true story of a voyage on the CHARLES W. MORGAN is both a wonderful read and an excellent source of information about American whaling in the 19th century."—Nathaniel Philbrick, author of IN THE HEART OF THE SEA

Set in the Blue Ridge Mountains, A Dog's Way Home is an unforgettable tale of the many miles, months, and mountains that divide two loyal friends—but that can't possibly keep them apart. Abby knows that Tam, her Shetland sheepdog, is her north star, and she's pretty certain she's his, too. But when an accident separates Abby and Tam, they both have fallen out of the sky and nothing will ever be right again. As the days between them turn to weeks, then months, dangers and changes fill up Abby's and Tam's lives. Will they ever find their way home to each other? Daddy says, "Most folks got a north star in their life—something that gives their life extra meaning. Mine is music." With a new introduction by the author, this is the story of Tam.

A groundbreaking meditation on our human-animal relationships and the moral code that binds it. Adam's Task, Vicki Hearne's innovative masterpiece on animal training, brings our perennial discussion of the human-animal bond to a whole new metaphysical level. Based on studies of literary criticism, philosophy, and extensive hands-on experience in training, Hearne asserts, in boldly anthropomorphic terms, that animals (at least those that interact more with humans) are far more intelligent than we assume. In fact, they are capable of developing an understanding of "the good," a moral code that influences their motives and actions. Drawing on an eclectic range of influences—Nietzsche, T. S. Eliot, Disney animal trainer William Koehler, and Genesis from the Bible, among others—Hearne writes in contemplative, exploratory, and brilliant prose as she interweaves personal anecdotes with philosophy. Hearne develops an entirely new system of animal training that contradicts modern animal behavioral research and that, as her examples show, is astonishingly effective. Widely praised, highly influential, and now with a new foreword by New York Times bestselling author Karen Joy Fowler, Adam's Task will make every trainer, animal psychologist, and animal-lover stop, think, and question.

It's South Africa 1990. Two major events are about to happen: the release of Nelson Mandela and, more importantly, it's Spud Milton's first year at an elite boys only private school. Cursed with parents from well beyond the lunatic fringe, a senile granny, and a dormitory full of strange characters, Spud has his hands full trying to adapt to his new home. Surrounded by names such as Gecko, Rambo, Rain Man and Mad Dog, Spud takes his first tentative steps along the path to manhood. (The path, it seems, could be a rather long road.) Armed with only his wits and his diary, Spud takes us from illegal night swimming to the red-hot furnace of the cricket pitch, from ghostbusting to a catastrophic family vacation. He also invites us into the mind of a boy struggling to come to terms with a strange new world; a boy whose eyes are being opened to love, friendship and complete insanity.

"What would happen to dogs if humans simply disappeared? Would dogs be able to survive on their own without the help of humans? Many people assume that dogs are so dependent on people that they could not and would not survive in a world without us. But is this true? And why does it matter to contemplate such a scenario? In this book, the authors argue that dogs would, as a species, survive without us and that imagining a world for dogs without humans allows us to explore a number of fascinating questions about the past, present, and future of dogs. The book opens by presenting the current state of dogs, including the surprising fact that of the c. 500 million dogs in the world only 20% are pets while the rest are street dogs, feral dogs, or strays, suggesting diversity in the ways which dogs exploit human habitats and by extension how they would fare without us. From there, the authors explore what is known about dog origins and their co-evolution with humans. The heart of the book draws on evolutionary biology to imagine what dogs might become, biologically, absent humans. For example, if dogs were no longer subjected to artificial selection pressures what would their evolutionary path look like? Would dogs become like their wolf ancestors? Would dogs maintain the evolved socio-cognitive skills that facilitate communication with humans? How would they interact with other animals? The authors conclude the book by asking whether dogs would be better or worse without humans, as imagining a world in which dogs are "wild" raises questions about pet keeping practices and about the costs of captivity for dogs. Ultimately, as the authors say, in thinking about who dogs might become without us we gain fresh insight into who dogs are on their own terms are and how our relationships with them can best benefit us both"--What would dogs ask for, if they knew how? In the Sunday Times bestseller In Defence of Dogs John Bradshaw, an anthropologist at Bristol University who has been at the centre of the latest research into what makes dogs tick, gives us the answers.Overturning the most common myths about dogs' emotions and behaviour, this book shows how we should really treat our pets, and stands up for dogdom: not the wolf in canine clothes, not the small furry child, not the trophy-winner, but the real dog, who wants to be part of the family and enjoy life - mankind's closest friend. This is the real science that every dog lover needs to know.

Investigations of a Dog: And Other Creatures

Beasts of Burden

Calling Animals by Name

This book is a clinical guide in the practice of pediatric critical care and can serve as a roadmap for an introductory journey through this broad and challenging subspecialty. Key topics intrinsic to the practice of pediatric critical care are addressed from an organ-system and disease-specific perspective, and tailored to the needs of new learners. Comprehensive, practical and up-to-date information is provided in a user-friendly format that facilitates both learning and care implications. Each topic is analyzed and discussed in a

custom-built section to provide both an overview and the necessary detail to help the reader participate in and contribute to patient care. Definitions, etiologies, physical findings, laboratory and radiologic data, differential diagnoses, management, suggested consultations and prognosis are condensed using easy-to-find boxes, bulleted lists, decision trees, tables and illustrations.

"It might be the most important book about being a parent that you will ever read." –Emily Rapp Black, New York Times bestselling author of The Still Point of the Turning World "Brooks's own personal experience provides the narrative thrust for the book – she writes unflinchingly about her own experience.... Readers who want to know what happened to Brooks will keep reading to learn how the case against her proceeds, but it's Brooks's questions about why mothers are so judgmental and competitive that give the book its heft." –NPR One morning, Kim Brooks made a split-second decision to leave her four-year old son in the car while she ran into a store. What happened would consume the next several years of her life and spur her to investigate the broader role America’s culture of fear plays in parenthood. In *Small Animals*, Brooks asks, Of all the emotions inherent in parenting, is there any more universal or profound than fear? Why have our notions of what it means to be a good parent changed so radically? In what ways do these changes impact the lives of parents, children, and the structure of society at large? And what, in the end, does the rise of fearful parenting tell us about ourselves? Fueled by urgency and the emotional intensity of Brooks’s own story, *Small Animals* is a riveting examination of the ways our culture of competitive, anxious, and judgmental parenting has profoundly altered the experiences of parents and children. In her signature style–by turns funny, penetrating, and always illuminating–which has dazzled millions of fans and been called "striking" by New York Times Book Review and "beautiful" by the National Book Critics Circle, Brooks offers a provocative, compelling portrait of parenthood in America and calls us to examine what we most value in our relationships with our children and one another.

A founder of the field of evolutionary medicine uses his decades of experience as a psychiatrist to provide a much-needed new framework for making sense of mental illness. Why do I feel bad? There is real power in understanding our bad feelings. With his classic *Why We Get Sick*, Dr. Randolph Nesse helped to establish the field of evolutionary medicine. Now he returns with a book that transforms our understanding of mental disorders by exploring a fundamentally new question. Instead of asking why certain people suffer from mental illness, Nesse asks why natural selection has left us all with fragile minds. Drawing on revealing stories from his own clinical practice and insights from evolutionary biology, Nesse shows how negative emotions are useful in certain situations, yet can become overwhelming. Anxiety protects us from harm in the face of danger, but false alarms are inevitable. Low moods prevent us from wasting effort in pursuit of unreachable goals, but they often escalate into pathological depression. Other mental disorders, such as addiction and anorexia, result from the mismatch between modern environment and our ancient human past. And there are good evolutionary reasons for sexual disorders and for why genes for schizophrenia persist. Taken together, these and many more insights help to explain the pervasiveness of human suffering, and show us new paths for relieving it by understanding individuals as individuals.

Determined to keep their dads safe on their trip to France, two dogs disguise themselves and follow along.

Becoming a Tiger

The Animal That Therefore I Am

A Puppy Tale

Insights from the Frontier of Evolutionary Psychiatry

Gender, Animals, and Madness

Book Description: The basis for the major motion picture 5 Flights Up starring Diane Keaton and Morgan Freeman. New York City is on high alert—a gasoline truck is stuck in the Midtown tunnel and the driver has fled. Through panic and gridlock, Alex and Ruth must transport their beloved old dachshund whose back legs are suddenly paralyzed to the animal hospital, using a cutting board as a stretcher. But this is also the

weekend when Alex and Ruth must sell the apartment in which they have lived for most of their adult lives. Over the course of forty-eight hours, as the mystery of the missing truck driver terrorizes the city and the dachshund's life hangs in the balance, the bidding war over their apartment becomes a barometer for collective hope and despair. Told in shifting points of view—Alex's, Ruth's, and the little dog's—*Heroic Measures* is a moving, deft novel about urban anxiety and the love that deepens over years.

Do depictions of crazy cat ladies obscure more sinister structural violence against animals hoarded in factory farms? Highlighting the frequent pathologization of animal lovers and animal rights activists, this book examines how the “madness” of our relationships with animals intersects with the “madness” of taking animals seriously. The essays collected in this volume argue that “animaladies” are expressive of political and psychological discontent, and the characterization of animal advocacy as mad or [crazy] distracts attention from broader social unease regarding human exploitation of animal life. While allusions to madness are both subtle and overt, they are also very often gendered, thought to be overly sentimental with an added sense that emotions are being directed at the wrong species.

Animaladies are obstacles for the political uptake of interest in animal issues—as the intersections between this volume and established feminist scholarship show, the fear of being labeled unreasonable or mad still has political currency.

Engaging science writing that bravely approaches a new frontier in medical science and offers a whole new way of looking at the deep kinship between animals and human beings. Zoobiquity: a species-spanning approach to medicine bringing doctors and veterinarians together to improve the health of all species and their habitats. In the tradition of Temple Grandin, Oliver Sacks, and Neil Shubin, this is a remarkable narrative science book arguing that animal and human commonality can be used to diagnose, treat, and ultimately heal human patients. Through case studies of various species--human and animal kind alike--the authors reveal that a cross-species approach to medicine makes us not only better able to treat psychological and medical conditions but helps us understand our deep connection to other species with whom we share much more than just a planet. This revelatory book reaches across many disciplines--evolution, anthropology, sociology, biology, cutting-edge medicine and zoology--providing fascinating insights into the connection between animals and humans and what animals can teach us about the human body and mind.

The translated, complete text of Derrida’s 1997 ten-hour address, “The Autobiographical Animal,” focusing on the industrialized treatment of animals. The Animal That Therefore I Am is at once an affectionate look back over the multiple roles played by animals in Derrida’s work and a profound philosophical investigation and critique of the relegation of animal life that takes place as a result of the distinction?dating from Descartes?between man as thinking animal and every other living species. That starts with the very fact of the line of separation drawn between the human and the millions of other species that are reduced to a single “the animal.” Derrida finds that distinction, or versions of it, surfacing in thinkers as far apart as Descartes, Kant, Heidegger, Lacan, and Levinas, and he dedicates extended analyses to the question in the work of each of them. The book’s autobiographical theme intersects with its philosophical analysis through the figures of looking and nakedness, staged in terms of Derrida’s experience when his cat follows him into the bathroom in the morning. In a classic deconstructive reversal, Derrida asks what this animal sees and thinks when it sees this naked man. Yet the experiences of nakedness and shame also lead all the way back into the mythologies of “man’s dominion over the beasts” and trace a history of how man has systematically displaced onto the animal his own failings or bêtises. The Animal That Therefore I Am is at times a militant plea and indictment regarding, especially, the modern industrialized treatment of animals. However, Derrida cannot subscribe to a simplistic version of animal rights that fails to follow through, in all its implications, the questions and definitions of “life” to which he returned in much of his later work.

Investigations of a Dog

How Baby Animals Learn to Live in the Wild

how anxious dogs, compulsive parrots, and elephants in recovery help us understand ourselves

Have you ever wondered if your dog might be a bit depressed? How about heartbroken or homesick? Animal Madness takes these questions seriously, exploring the topic of mental health and recovery in the animal kingdom.

A beautifully written, deeply provocative inquiry into the intersection of animal and disability liberation—and the debut of an important new social critic How much of what we understand of ourselves as "human" depends on our physical and mental abilities—how we move (or cannot move) in and interact with the world? And how much does our definition of "human" depend on its difference from "animal"? Drawing on her own experiences as a disabled person, a disability activist, and an animal advocate, author Sunaura Taylor persuades us to think deeply, and sometimes uncomfortably, about what divides the human from the animal, the disabled from the nondisabled—and what it might mean to break down those divisions, to claim the animal and the vulnerable in ourselves, in a process she calls “cripping animal ethics.” *Beasts of Burden* suggests that issues of disability and animal justice, which have heretofore primarily been presented in opposition, are in fact deeply entangled. Fusing philosophy, memoir, and science—including factory farming, disability oppression, and our assumptions of human superiority over animals—Taylor draws attention to new worlds of experience and empathy that will open up important avenues of solidarity across species and ability. *Beasts of Burden* is a wonderfully engaging and elegantly written work, both philosophical and personal, by a brilliant debut author.

The Surprising Science of How We "Catch" Mental Illness

Committed trainers and owners can solve this problem!

Treating separation anxiety in dogs is not quick or easy—but it can be done. The successful ingredients are cooperation, commitment and time on the part of the dog trainer and the owners. In this important new book, author Malena DeMartini-Price shares her 5 Phase Treatment Protocol and related strategies to help dogs overcome the fear of being left alone and addresses the trauma it can inflict on both the dog and their owners. Trainer handouts, detailed step-by-step training tips and a sample initial interview questionnaire are included.

Learn about:

- The critical role that “suspending absences” plays in the early part of the treatment plan and how owners and trainers can make this more manageable.
- How dog trainers can make the treatment of separation anxiety in dogs a specialized business.
- The role that management techniques and medications can play to help support the recommended behavior modification strategies.
- How technology, including remote feeding devices and web cams, can be used to monitor a dog’s progress in overcoming his fear of being left alone.

Book Description: Winner of the 2015 Scotiabank Giller Prize Finalist for the 2015 Toronto Book Awards Winner of the 2015 Rogers Writers' Trust Fiction Prize "[Alexis] devises an inventive romp through the nature of humanity in this beautiful, entertaining read ... A clever exploration of our essence, communication, and how our societies are organized." – Kirkus Reviews "This might be the best set-up of the spring." – The Globe & Mail "André Alexis has established himself as one of our preeminent voices." – Toronto Star — I wonder, said Hermes, what it would be like if animals had human intelligence. — I'll wager a year's servitude, answered Apollo, that animals – any animal you like – would be even more unhappy than humans are, if they were given human intelligence. And so it begins: a bet between the gods Hermes and Apollo leads them to grant human consciousness and language to a group of dogs overnighting at a Toronto veterinary clinic. Suddenly capable of more complex thought, the pack is torn between those who resist the new ways of thinking, preferring the old 'dog' ways, and those who embrace the change. The gods watch from above as the dogs venture into their newly unfamiliar world, as they become divided among themselves, as each struggles with new thoughts and feelings. Wily Benjy moves from home to home, Prince becomes a poet, and Majnoun forges a relationship with a kind couple that stops even the Fates in their tracks. André Alexis's contemporary take on the apologue offers an utterly compelling and affecting look at the beauty and perils of human consciousness. By turns meditative and devastating, charming and strange, *Fifteen Dogs* shows you can teach an old genre new tricks. André Alexis was born in Trinidad and grew up in Canada. His debut novel, *Childhood*, won the Books in Canada First Novel Award, the Trillium Book Award, and was shortlisted for the Giller Prize and the Writers' Trust Fiction Prize. His other previous books include *Asylum*, *Beauty and Sadness*, *Ingrid & the Wolf* and, most recently, *Pastoral*, which was also nominated for the Rogers Writers' Trust Fiction Prize and was named a Globe and Mail Top 100 book of 2014.

Investigations of a Dog (German: Forschungen eines Hundes) is a short story by Franz Kafka written in 1922. It was published posthumously in *Beim Bau der Chinesischen Mauer* (Berlin, 1931). Told from the perspective of a dog, the story concerns the nature and limits of knowledge, by way of the dog's inquiries into the practices of his culture. *Investigations of a Dog* was written in September and October 1922, soon after Kafka ended work on his unfinished novel *The Castle*. Similar to other Kafka stories such as *A Report to an Academy*, *Josephine the Singer*, and *The Burrow*, the protagonist is an animal.

A groundbreaking look at the connection between germs and mental illness, and how we can protect ourselves. Is it possible to catch autism or OCD the same way we catch the flu? Can a child's contact with cat litter lead to schizophrenia? In her eye-opening new book, National Book Critics Circle Award-winning author Harriet Washington reveals that we can in fact "catch" mental illness. In *Infectious Madness*, Washington presents the new germ theory, which posits not only that many instances of Alzheimer's, OCD, and schizophrenia are caused by viruses, prions, and bacteria, but also that with antibiotics, vaccinations, and other strategies, these cases can be easily prevented or treated. Packed with cutting-edge research and tantalizing mysteries, *Infectious Madness* is rich in science, characters, and practical advice on how to protect yourself and your children from exposure to infectious threats that could sabotage your mental and physical health.

New York Times bestselling author W. Bruce Cameron presents the totally irresistible tale of a little stray puppy rescued from a life on the streets to become the star of *A Dog's Way Home*, the basis for the major motion picture! Shelby doesn't remember much of her early life—only that she was always hungry and cold. Then one day, Shelby is rescued by a kind woman, and things change forever. She soon finds herself on a movie set, and her new life is filled with challenges and rewards. She learns things like to Go Mark, Cut, and Dig. Her rewards include squeaky toys, yummy chicken, and best of all, love and affection from castmates and crew. Everyone loves Shelby! And so will young readers and movie fans. *Shelby's Story* includes charming illustrations by Richard Cowdrey as well as a reading and activity guide at the end of the book. At the

Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

The most celebrated book on counterpoint is Fux's great theoretical work GRADUS AD PARNASSUM. Since its appearance in 1725, it has been used by and has directly influenced the work of many of the great composers, including J.S. Bach, Haydn, and Beethoven. Originally written in Latin, this work has been translated in to the principal European languages. The present translation by Alfred Mann is the first faithful rendering in English, presenting the essence of Fux's teachings.
