Trauma is a disease of epidemic proportions that preys on the young, killing more Americans up to age thirty-seven than all other afflictions combined. Every year an estimated 2.8 million people are hospitalized for injuries and more than 180,000 people die. We take for granted that no matter how or where we are injured, someone will call 911 and trained first responders will show up to insert IVs, stop the bleeding, and swiftly deliver us to a hospital staffed by doctors and nurses with the expertise necessary to save our lives. None of this happened on its own. Told through the eyes of a surgeon who has flown on rescue helicopters, resuscitated patients in trauma centers in Houston and Chicago, and operated on hundreds of trauma victims of all ages, *Hurt* takes us on a tour of the advancements in injury treatment from the battlefields of the Civil War to the state-of-the-art trauma centers of today.

This is the first book exploring the unique dynamics created by a multidisciplinary trauma team and how crisis management strategies can improve teamwork and communication and, potentially, improve patient resuscitation outcomes. Crisis resource management (CRM) is integral to the way that we manage ourselves, team members, and patients during emergency situations. It is essentially the ability to translate knowledge of what needs to be done into effective actions during a crisis situation. Building on the revolutionary American College of Surgeons Advanced Trauma Life Support (ATLS®) course, Trauma Team Dynamics illustrates the integration of the principles of CRM to team dynamics throughout the resuscitation -from the scene, through pre-hospital care and transport, to the trauma bay, and finally to definitive care and beyond. The editors and contributors are international experts in trauma, critical care, emergency medicine, nursing, respiratory therapy, and pre-hospital care and include NASA- and United States military-affiliated experts. Trauma Team Dynamics is intended for use as both a day-to-day clinical resource and a reference text, and includes self-assessment questions as well as guidance on CRM curriculum design and implementation.

Trauma is the leading cause of death among people under the age of 40 and it ranks third for all age groups. Still, relatively few clinicians specialize in trauma and training is often obtained through experience. The number of trauma patients is expected to continue to grow as pre-hospital care continues to advance. As well, hospitals increasingly see trauma treatment, which requires no pre-approval, as a good source of revenue. Given these developments, the number of opportunities for specialists trained in trauma, including anesthesiologists and critical care physicians, will expand in the years ahead.
