The Business Valuation Case Law Yearbook, 2018 Edition is essential for business appraisers and attorneys who want to stay ahead of their peers on the most important legal issues brought up in business valuation-related cases. With in-depth analysis from BVR's legal team, the lessons learned in this book help appraisers reach better and more defensible valuation conclusions. And, attorneys who retain appraisers as financial experts learn how their experts can help them win (or lose) in court. The Yearbook analyzes the year's most meaningful valuation-related issues in the major courts including marital disputes, breach of contract actions, damages, dissenting shareholder disputes, estate and gift tax cases, federal taxation, intellectual property cases, bankruptcy litigation, and more. All the cases featured in this book impart important lessons about applicable legal principles, approved and discredited valuation methodology, and the act (art) of presenting expert opinions. This must-have collection benefits both the generalist as well as the specialist.

The price at which a stock is traded in the market reflects the ability of the firm to generate cash flow and the risks associated with generating the expected future cash flows. The authors point to the limits of widely used valuation techniques. The most important of these limits is the inability to forecast cash flows and to determine the appropriate discount rate. Another important limit is the inability to determine absolute value. Widely used valuation techniques such as market multiples - the price-to-earnings ratio, firm value multiples or a use of multiple ratios, for example - capture only relative value, that is, the value of a firm's stocks related to the value of comparable firms (assuming that comparable firms can be identified). The study underlines additional problems when it comes to valuing IPOs and private equity: Both are sensitive to the timing of the offer, suffer from information asymmetry, and are more subject to behavioral elements than is the case for shares of listed firms. In the case of IPOs in

particular, the authors discuss how communication strategies and media hype play an important role in the IPO valuation/pricing process.

The New Yearbook for Phenomenology and Phenomenological Philosophy

Digital methodologies, new forms of data visualization and computer-based learning and assessment are creating new challenges as well as opportunities for scholars in educational research. The World Yearbook of Education 2019 explores this highly relevant topic, opening a new discussion about the various conceptual and methodological challenges and opportunities in contemporary educational research. This volume explores contemporary methods of inquiry, with chapters organized around four topics of enduring interest in this field: impacts, patterns, relations and contexts. The World Yearbook of Education 2019 comprises contributions from internationally renowned scholars exploring novel concepts and methodologies in grappling with contemporary empirical phenomena in educational research. Vital questions such as how we understand the technological developments that are creating new possibilities for and demands on education, and how we make sense of complex cases that cut across multiple nations, are discussed. This newest addition to the prestigious World Yearbook of Education series provides a fascinating read for scholars in the fields of education policy and comparative education. It is not only a useful resource for educational researchers and policy makers examining new trends and emerging issues, but would be of interest to graduate students exploring innovative methodologies, particularly in the study of education and education policy.

The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement

learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

Investors have too often extrapolated from recent experience. In the 1950s, who but the most rampant optimist would have dreamt that over the next fifty years the real return on equities would be 9% per year? Yet this is what happened in the U.S. stock market. The optimists triumphed. However, as Don Marquis observed, an optimist is someone who never had much experience. The authors of this book extend our experience across regions and across time. They present a comprehensive and consistent analysis of investment returns for equities, bonds, bills, currencies and inflation, spanning sixteen countries, from the end of the nineteenth century to the beginning of the twenty-first. This is achieved in a clear and simple way, with over 130 color diagrams that make comparison easy. Crucially, the authors analyze total returns, including reinvested income. They show that some historical indexes overstate long-term performance because they are contaminated by survivorship bias and that long-term stock returns are in most countries seriously overestimated, due to a focus on periods that with hindsight are known to have been successful. The book also provides the first

comprehensive evidence on the long-term equity risk premium--the reward for bearing the risk of common stocks. The authors reveal whether the United States and United Kingdom have had unusually high stock market returns compared to other countries. The book covers the U.S., the U.K., Japan, France, Germany, Canada, Italy, Spain, Switzerland, Australia, the Netherlands, Sweden, Belgium, Ireland, Denmark, and South Africa. Triumph of the Optimists is required reading for investment professionals, financial economists, and investors. It will be the definitive reference in the field and consulted for years to come.

This one-stop information Guide helps practitioners whenever employee-owner compensation is subject to review and adjustment. In all private companies, an expense that is discretionary to the owner in terms of size, timing and payment method may represent not only compensation for services rendered, but also disguises dividends or profit distribution. The valuation of a business could be greatly affected by owner's compensation, or the lack thereof. This book is also an invaluable resource when valuing non-compete agreements or calculating personal vs. enterprise goodwill. If you purchased all these reports individually, the cost would be over \$600.

The Yearbook on International Investment Law & Policy is an annual publication which provides a comprehensive overview of current developments in the international investment law and policy field, focusing on recent trends and issues in foreign direct investment (FDI), investment treaty practice, and investor-state arbitration. Several themes emerge in this 2015-2016 edition of the Yearbook. Key among them is the undercurrent of change and evolution in investment law and policy, as well as that of investment trends. Part I of this edition covers fundamental shifts in the investment treaty landscape in 2015 and 2016, underscoring the uncertainty over the direction of future agreements. This edition also highlights changes in the practices of multinational enterprises over time and raises question as to whether efforts to track and understand firms' investments through data on FDI have kept pace. The discussion of investment arbitration decisions and awards highlights outcomes which, in some cases, suggest new directions of arbitral decisions. This theme continues in Part II. Chapters highlight emerging understandings regarding outcomes of treaty disputes, and the ways in which treaties and decisions are shaping government decision-making. There is discussion on how change in international business, including the fragmentation of production and consumption in global value chains, is or is not reflected in the design and application of investment treaties. There is also coverage of change in China, both in terms of China's legal status as a (non)market economy under WTO law, and in how arbitrators have arguably altered longstanding Chinese policies regarding the territorial reach of Chinese treaties. This edition also reflects a maturation of investment law, as new analysis highlights the importance of nuance in commonly stated conclusions and principles. Chapters ask "what does and should 'equality of the parties' mean in investment law?," especially when disparate access to resources and information seems to tilt the playing field. Other chapters investigate the implications of the fact that states, considered as one entity for the purpose of responsibility at the international level,

often are made up of different relatively autonomous units. Edited by an Editorial Committee and overseen by an Advisory Board of esteemed global experts in the field of international investment law, the Yearbook is an essential tool for practitioners and academics looking for a resource of timely and authoritative information in this field.

This latest volume in the World Yearbook of Education Series considers changing space-times of education by asking how they become unevenly textured as our worlds globalise, horizons shift and familiar points of reference melt and are remade. Acknowledging the reach of economic and cultural change, digital communication, geopolitics and persistent inequalities, the chapters trace processes that are re-making education and societies. Examining the depth of their impact on practices, methods and concepts reveals the significance of knowledge-building and socially embedded forms of reasoning in emerging patterns of educational governance, pedagogic and policy reforms as well as in lived understandings of self and social worlds. The organisation of the collection into three sections – Making Spaces, Troubling Temporalities, and Mobility and Contexts – begins to map out an ambitious project. It calls on education researchers and professionals to write the present as history by grasping the socio-spatial, historical and political dimensions and effects that frame, form and filter the educational present. This research calls for a revitalised historical sociology and novel forms of comparative education that can provide productive insights, inform creative problem solving and suggest practical directions for education. This agenda recognises: the unevenness of educational space-times the making of education as a social institution the persistence and effects of social embeddedness, eventful space, situated knowledge, and

geosocial thinking the present as history and multiple temporalities in education different registers of transformation that become visible through lenses such as identity, work, citizenship and mobility. The World Yearbook of Education 2018 continues the project of compiling worldwide research on globalising education. These volumes offer a powerful commentary on how and why space-times of education are changing and emphasise the importance of forms of knowledge that materialise categories of professionals, policies and practices. This volume will be of interest to academics, professionals and policymakers in education and social policy, and also to scholars who engage in historical studies of education and debates about the socio-material formations that contribute to educational inequalities and dynamics of difference.
