This book, Space Capstone Publication Spacepower: Doctrine for Space Forces, is capstone doctrine for the United States Space Force and represents our Service's first articulation of an independent theory of spacepower. This publication answers why spacepower is vital for our Nation, how military spacepower is employed, who military space forces are, and what military space forces value. In short, this capstone document is the foundation of our professional body of knowledge as we forge an independent military Service committed to space operations. Like all doctrine, the SCP remains subject to the policies and strategies that govern its employment. Military spacepower has deterrent and coercive capacities - it provides independent options for National and Joint leadership but achieves its greatest potential when integrated with other forms of military power. As we grow spacepower theory and doctrine, we must do so in a way that fosters greater integration with the Air Force, Army, Navy, Marine Corps, and Coast Guard. It is only by achieving true integration and interdependence that we can hope to unlock spacepower's full potential.

"Expert Card Technique" by Jean Hugard and Frederick Braue is a detailed and instructive guide on how to master the manipulation of cards. Jean Hugard, born John Gerard Rodney Boyce in Queensland, Australia in 1872, began his professional career as a magician in 1896 and eventually moved to America in 1915 where he worked in vaudeville and as a stage magician. He retired from performing professionally around 1930 and began a prolific and successful career writing books on magic. As he became older and lost his eyesight, the magician Frederick Braue began co-writing several books with Hugard on the art of card magic. Braue was a journalist and semi-professional magician who specialized in card tricks and was viewed as a master at this skill. In their book "Expert Card Technique", these magical geniuses show even the most novice beginner how to learn to manipulate cards in basic ways and then moves on to teach more advanced flourishes, such as forces, fans, and prearranged decks. This guide is indispensable to anyone who wishes to handle cards with impressive dexterity and for those studying magic, as these are skills that must be mastered before complicated card tricks can be performed with ease. This edition is printed on premium acid-free paper.

Rising young comedian Moshe Kasher is lucky to be alive. He started using drugs when he was just 12. At that point, he had already been in psychoanalysis for 8 years. By the time he was 15, he had been in and out of several mental institutions, drifting from therapy to rehab to arrest to...you get the picture. But KASHER IN THE RYE is not an "eye opener" to the horrors of addiction. It's a hilarious memoir about the absurdity of it all. When he was a young boy, Kasher's mother took him on a vacation to the West Coast. Well it was more like an abduction. Only not officially. She stole them away from their father and they moved to Oakland , California. That's where the real fun begins, in the war zone of Oakland Public Schools. He was more than just out of control-his mother walked him around on a leash, which he chewed through and ran away. Those early years read like part Augusten Burroughs, part David Sedaris, with a touch of Jim Carrol...but a lot more Jewish. In fact, Kasher later spends time in a Brooklyn Hasidic community. Then came addiction... Brutally honest and laugh-out-loud funny, Kasher's first literary endeavor finds humor in even the most horrifying situations. A local Singaporean magazine dedicated to photography and videography.

[This] introductory textbook examines theories of personality, starting from the viewpoint that there are eight basic aspects to personality: psychoanalytic, ego, biological, behaviorist, cognitive, trait, humanistic, and interactionist. Later chapters apply these aspects to individual differences such as those of gender and culture. Summaries after each chapter encapsulate key theorists and concepts discussed. -<http://www.bn.com>.

This volume provides a mechanism to uncover the extremely rich split-CP of V2 languages, in both root and embedded clauses, on the basis of theoretical arguments and empirical findings. The movement of the inflected verbal head is triggered to agree with the profiled informational value of the fronted XP. The V2 "constraint" shall thus be observed as a sum of micro-V2s, in which the inflected head creates Spec-Head configurations with the activated criterial positions in the relevant context. The "second linear" position of the verb results from the movement of the inflected verb to the highest activated criterial head. In other words, there is no "bottleneck effect", but ordinary violations in terms of locality between fronted XPs. This monograph is aimed principally at postgraduate students and researchers interested in the description of natural languages adopting the guidelines of the Cartography of Syntactic Structures.
