Government organizations spend enormous amounts of money. They employ a large percentage of the work force. They have an undeniably huge impact on the national economy and wealth. Yet they are, for the most part, unmanaged. What passes for management is a combination of oversight and audit. Oversight is primarily reactive: offering negative feedback for failures and demanding additional rules and regulations to prevent recurrences. Audits look for "bright line" discrepancies and clear violations to those rules and regulations. Government operations are often criticized for "waste and mismanagement."Yet the current situation, unfortunately, can best be described as one of "un-management" rather than "mis-management." Government can run better. The purpose of this book is to look at how government can move from "rule driven" to "leadership driven" management. Specifically, it will document and discuss specific examples of successful cost informed decision making and cost management and control in government. It will also delineate the requirements of such success and explore the special needs of transforming the management culture of government from its well embedded past practices to a new paradigm of leadership driven management.

The structure of thisreview is designed to assessthe importance of each element as part of the overall picture. Consequently, there will be no detailed discussions of certain papers per se, although they will be cited in the references and in the appendices. Dechow and Skinner (2000) discusses the basic definition of manipulation, but they mainly set out to investigate a new orientation in the research based on new motivations, linked to market expectations. In doing so, their goal is to reconcile the views of academics and practitioners about earnings management. Healy and Wahlen (1999), on the other hand, aim to provide useful information for standard setting purposes. For instance, they emphasize the specific accruals that have been found in the literature to be particularly frequently "managed". They then investigate the effect of manipulation on market participants. Like Dechow and Skinner (2000), although they consider the possibility that users may not be able to make appropriate adjustments to eliminate the effect of the manipulation, they mostly remain within the concept of market efficiency

This book mainly focuses on defining profit models, on how many main kinds of profit models there are, how profit models can change a company, and how to tailor a profit model to the needs of a certain company. In this context, profit models are classified as fixed-income, remaining-profit and profit-sharing, admission, toll, parking, fuel and sharing fees, profit sources, customer pricing, auction, combined pricing, etc. The logic behind all these profit models will be analyzed in detail and numerous micro-cases will be introduced. All of the micro-cases discussed are the best profit model practices used by outstanding enterprises, mainly from China and the USA (including HomeAway, Priceline, Tencent, Sina, Google, the Voice of China, CSPN and so on). These models will be complemented by a wealth of figures and additional tools to help readers better understand the principle of profit models. As such, the book not only explains "why" entrepreneurs preferred to apply a specific kind of profit model and not others, but also answers "how" they derived that model.

This book, dedicated to Prof. Jacques Richard, is about the economic, political, social and even environmental consequences of setting accounting standards, with emphasis on those that are alleged to be precipitated by the adoption and implementation of IFRS. The authors offer their reasoned critiques of the effectiveness of IFRS in promoting genuine global comparability of financial reporting. The editors of this collection have invited authors from 17 countries, so that a great variety of accounting, auditing and regulatory cultures, and educational perspectives, is amply on display in their essays.

Drawing on decades-long relationships and fieldwork with the Zapatistas of south-eastern Mexico, cultural anthropologists Duncan Earle and Jeanne Simonelli reveal a complex portrait of a people struggling with self-determination on every level. Combining their own compelling narrative as participant-observers, and those of their Chaipas compadres, the authors effectively call for an activist approach to research, resulting in an ethnography that is at once analytical and deeply personal. Uprising of Hope is compelling reading for scholars and general readers of anthropology, social justice, ethnography, Latin American history and ethnic studies.

Many scholars, practitioners, and policy-makers in the cultural sector argue that Canadian cultural policy is at a crossroads: that the environment for cultural policy-making has evolved substantially and that traditional rationales for state intervention no longer apply. The concept of cultural citizenship is a relative newcomer to the cultural policy landscape, and offers a potentially compelling alternative rationale for government intervention in the cultural sector. Likewise, the articulation and use of cultural indicators and of governance concepts are also new arrivals, emerging as potentially powerful tools for policy and program development. Accounting for Culture is a unique collection of essays from leading Canadian and international scholars that critically examines cultural citizenship, cultural indicators, and governance in the context of evolving cultural practices and cultural policy-making. It will be of great interest to scholars of cultural policy, communications, cultural studies, and public administration alike.
