for the treatment of end-stage renal disease patients is predominantly performed in European countries and in Japan, with some differences in technique such as rate of blood flow and dialysis fluid delivery systems. The main focus of this book is on the clinical importance of online HDF, the techniques of which have been re-evaluated with the introduction of super high-flux membrane dialyzers. After a brief introduction into the history of HDF, recent advances and clinical

*balanced perspective that helps manufacturers better select, implement, and maintain a quality, value-added cleaning process. The first volume, Handbook for Critical Cleaning: Cleaning Agents and Systems, gives manufacturers a practical understanding of the variety and functions of cleaning chemistries and cleaning, rinsing, and drying equipment. Topics include aqueous, solvent, and "non-chemical" approaches. Readers can compare process costs, performance, and regulatory issues, and then choose their best option.*
