manifesto for mature riders who want to stay healthy, avoid injury – and maximise their achievement levels. Time's arrow traditionally plots an incremental path into declining strength and speed for all of us. But we are different to every other generation of cyclists in human history. An ever-growing number of us are determined to scale the highest peaks of elite physical fitness into middle-age and beyond. Can the emerging medical and scientific research help us achieve the holy triumvirate of speed and health with age? The Midlife Cyclist offers a gold standard road-map for the mature cyclist who aims to train, perform and even race at the highest possible level.

and original research, this volume offers key insights into the historical, cultural, social, economic and political forces at play in the creation of world-class ICT innovations in Kenya. Following the arrival of fiber-optic cables in 2009, Digital Kenya examines why the initial entrepreneurial spirit and digital revolution has begun to falter despite support from motivated entrepreneurs, international investors, policy experts and others. Written by engaged scholars and professionals in the field, the book offers 15 eye-opening chapters and 14 one-on-one conversations with entrepreneurs and investors to ask why establishing ICT start-ups on a continental and global scale remains a challenge on the “Silicon Savannah”. The authors present

evidence-based recommendations to help Kenya to continue producing globally impactful ICT innovations that improve the lives of those still waiting on the side-lines, and to inspire other nations to do the same. Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a

This is the second edition of Wil van der Aalst's seminal book on process mining, which now discusses the field also in the broader context of data science and big data approaches. It includes several additions and updates, e.g. on inductive mining techniques, the notion of alignments, a considerably expanded section on software tools and a completely new chapter of process mining in the large. It is self-contained, while at the same time covering the entire process-

mining spectrum from process discovery to predictive analytics. After a general introduction to data science and process mining in Part I, Part II provides the basics of business process modeling and data mining necessary to understand the remainder of the book. Next, Part III focuses on process discovery as the most important process mining task, while Part IV moves beyond discovering the control flow of processes, highlighting conformance checking, and organizational and time perspectives. Part V offers a guide to successfully applying process mining in practice, including an introduction to the widely used open-source tool ProM and several commercial products. Lastly, Part VI takes a step back, reflecting on the material presented and the key open

A Field Guide to Conservation Finance provides essential advice on how to tackle the universal obstacle to protecting private land in America: lack of money. Story Clark dispels the myths that conservationists can access only private funds controlled by individuals or that only large conservation organizations have clout with big capital markets. She shows how small land conservation organizations can achieve conservation goals using both traditional and cutting-edge financial strategies. Clark outlines essential tools for raising money, borrowing money, and reducing the cost of transactions. She covers a range of

subjects including transfer fees, voluntary surcharges, seller financing, revolving funds, and Project Related Investment programs (PRIs). A clear, well-written overview of the basics of conservation finance with useful insights and real stories combine to create a book that is an invaluable and accessible guide for land trusts seeking to protect more land.

The first section of the book covers more than 50 different freshwater and saltwater fish. For each specific fish, you'll find information about the types of waters where you can find the fish, details about their habits, the best ways of presenting baits or lures, and consistent places where you can catch that fish. The second section gives details about 100 bodies of water, arranged geographically into mountains, Piedmont, and coastal

sections. Each entry covers the best ways to catch particular species at that location and the best places in the water body to begin fishing. It also offers general information such as special rules and regulations, nearest campgrounds, and directions to access points. Using this guide will help you know where to go, what to bring, and what to expect when fishing throughout the state.

Creating Q*bert and Other Classic Video Arcade Games takes you inside the video arcade game industry during the classic decades of the 1980s and 1990s. Warren Davis, the creator of the groundbreaking Q*bert, worked as a member of the creative teams who developed some of the most popular video games of all time, including Joust 2, Mortal

Kombat, NBA Jam, and Revolution X. In a witty and entertaining narrative, Davis shares insightful stories that offer a behind-the-scenes look at what it was like to work as a designer and programmer at the most influential and dominant video arcade game manufacturers of the era, including Gottlieb, Williams/Bally/Midway, and Premiere. Likewise, the talented artists, designers, creators, and programmers Davis has collaborated with over the years reads like a who's who of video gaming history: Eugene Jarvis, Tim Skelly, Ed Boon, Jeff Lee, Dave Thiel, John Newcomer,

George Petro, Jack Haegar, and Dennis Nordman, among many others. The impact Davis has had on the video arcade game industry is deep and varied. At Williams, Davis created and maintained the revolutionary digitizing system that allowed actors and other photo-realistic imagery to be utilized in such games as Mortal Kombat, T2, and NBA Jam. When Davis worked on the fabled Us vs. Them, it was the first time a video game integrated a live action story with arcade-style graphics. On the one-of-a-kind Exterminator, Davis developed a brand new video game hardware

system, and created a unique joystick that sensed both omnidirectional movement and rotation, a first at that time. For Revolution X, he created a display system that simulated a pseudo-3D environment on 2D hardware, as well as a tool for artists that facilitated the building of virtual worlds and the seamless integration of the artist's work into game code. Whether you're looking for insights into the Golden Age of Arcades, would like to learn how Davis first discovered his design and programming skills as a teenager working with a 1960s computer called a Monrobot XI,

In every city, the urban spaces that form the public realm—ranging from city streets, neighborhood squares, and parks to public facilities such as libraries and markets—account for about one-third of the city’s total land area, on average. Despite this significance, the potential for these public-space assets—typically owned

and managed by local governments—to transform urban life and city functioning is often overlooked for many reasons: other pressing city priorities arising from rapid urbanization, poor urban planning, and financial constraints. The resulting degradation of public spaces into congested, vehicle-centric, and polluted places often becomes a liability, creating a downward spiral that leads to a continuous drain on public resources and exacerbating various city problems. In contrast, the cities that invest in the creation of human-centered, environmentally sustainable, economically vibrant, and socially inclusive places—in partnership with government entities,

communities, and other private stakeholders—perform better. They implement smart and sustainable strategies across their public space asset life cycles to yield returns on investment far exceeding monetary costs, ultimately enhancing city livability, resilience, and competitiveness. The Hidden Wealth of Cities: Creating, Financing, and Managing Public Spaces discusses the complexities that surround the creation and management of successful public spaces and draws on the analyses and experiences from city case studies from around the globe. This book identifies—through the lens of asset management—a rich palette of creative and innovative
