the third most populous country on the African continent after Nigeria and Egypt. It is the source of 86 percent of the water reaching the Aswan Dam in Egypt, most of it carried by the amazing Blue Nile. Ethiopia offers major historical sites such as the pre-Christian palace at Yeha, the stele and tombs of the old Kingdom of Axum, and the rock-carved churches of Lalibela. For anyone interested in Ethiopia, this historical dictionary, through its individual and carefully cross-referenced entries, captures the importance and intrigue of this truly significant African nation. Historical Dictionary of Ethiopia appeals to all levels of readers, providing entries for

each of Ethiopia's 85 ethnic groups and covering a broad range of cultural, political, and economic topics. Readers interested in the cultural aspects or who are planning to visit Ethiopia will find a wealth of entries on art, literature, handicrafts, music, dance, bird life, geography, and historic tourist sites. Practitioners in government and non-governmental organizations will find entries on pressing economic, social, and political issues such as HIV/AIDS, female circumcision , debt, human rights, and the environment. The important historical role of missionaries and the combination of conflict and cooperation between Christians and Muslims in the region are also issues reviewed. And,

finally, many of the entries highlight relations between Ethiopia and her neighbors-Eritrea, Somalia, Somaliland, Djibouti, Kenya, and Sudan. In the bibliography, considerable emphasis has been placed on including both new and old materials covering all facets of Ethiopia, organized for easy identification by areas of major interest.

This book considers the problem of providing maximum access to transport services, and to roads for the rural population of the world's developing countries when limited funds are available. Access is a key factor in both social and economic development. It promotes social intercourse and opens up markets for

both the rural and urban populations. Access connotes the ability to travel and to transport goods. The components of access include both the infrastructure and the transport modes or aids that use the infrastructure.

The seventh edition of Assessing Regional Integration in Africa (ARIA VII) examines how the three elements of regional integration, innovation and competitiveness are interlinked. It explores the prospects for harnessing them within the framework of Africa's normative regional integration development model oriented to foster structural change. Evidence

presented in ARIA VII for a sample of 15 African countries for the period between 1995 and 2010 shows that growth in most of the sample countries has been achieved through factor accumulation rather than through significant improvements with input combinations that are associated with innovation. Based on theoretical and empirical insights, the report makes recommendations as to how further regional integration boost Africa's capacity for innovation and competitiveness. In addition, the report provides an overview of regional integration trends in Africa, including an analysis of data from the African Regional

experienced massive social, economic, and political transformations which have given rise to military coups, revolutions and intractable ethnic, socio-economic, and religious conflicts. This comprehensive volume brings together a team of expert scholars who analyze international, regional, national, and local affairs in the Horn of Africa. The chapters demonstrate the intertwined nature of the actors and forces shaping political realities. The case studies, focusing on Ethiopia, Eritrea, Somalia, Somaliland, Sudan, and South Sudan eloquently illustrate the complex dynamics

This book analyzes the origins and the impacts of China's Belt and Road Initiative (BRI) on diplomacy, economy (trade, investment, finance), and security among selected host countries and regions in Asia, Africa, and the European Union. By examining the geopolitical economy of BRI activities, it concisely describes the impact of the rise of China and its BRI policy strategy on the reshaping of world order and global governance. This volume

explores the BRI by addressing several key questions including: • Why did the Chinese leadership set up the BRI? • What are the activities of BRI projects in the participating countries and related regions? • What are the challenges to the successful implementation of the BRI in the various countries and regions? Moreover, through its analysis of the abovementioned questions, it provides novel contributions to the ongoing scholarly debates between Chinese and non-Chinese scholars – among others, the debate surrounding the “rise of China” and its impact on global governance. Featuring an extensive variety of expert contributors, this study will be an essential reading for students and scholars of International Relations and Global Political Economy as well as Chinese politics and those with an interest in the Belt and Road Initiative more broadly. The BRI proposed by President Xi Jinping in 2013 has made great

This book comprises select peer-reviewed papers presented at the International Conference on Sustainable Development through Engineering Innovations (SDEI) 2020. It presents recent advances, new directions, and opportunities for sustainable and resilient approaches to design and protect the built-environment through engineering innovations & interventions. The topics covered are highly diverse and include all civil engineering and construction-related aspects such as construction and environmental Issues,

durability and survivability under extreme conditions, design of new materials for sustainability, eco-efficient and ultra-high performance cementitious materials, embedded structural and foundation systems and environmental geomechanics. The book will be of potential interest to the researchers and students in the fields of civil engineering, architecture and sustainable development.

This volume presents innovative work on innovative methods, tools and practices aimed at supporting the transition of Asian and Middle Eastern cities and regions towards a more smart and sustainable dimension. The role of the built and urban environment are becoming more pronounced in Asia and Middle East as the regions continues to experience rapid increase in population and urbanisation, which have only led to an increase in environmental

This volume, titled *Africa's Growing Role in World Politics*, includes a selection of papers dedicated to the problems of the contemporary international relations and foreign policies of the African states. Most of these papers were presented at the panels, held within the framework of the 13th International Conference of Africanists Society and Politics in Africa: Traditional, Transitional and New (Moscow, Russia, May 27-30, 2014). The book contains many articles devoted to the Western countries policies in Africa. On the background of

the ongoing competition between Washington and Beijing, the US Administration has recently increased the amount of attention it pays to the continent. European Union is also actively developing its strategic partnership with Africa. The authors analyze thoroughly the ongoing cooperation between African states and a great emerging donor and investor China. They particularly address the question about possible implications of Chinas African policy for the countries of the continent. Major attention is given to Sudan and South Sudan. One of the urgent problems addressed by this book is the

Master's Thesis from the year 2013 in the subject Engineering - Civil Engineering, grade: Very Good (A), Addis Ababa University (Addis Ababa University Institute of Technology), course: Structural Engineering, language: English, abstract: This thesis focuses on the development of a FORTRAN 95 program for the structural design of the superstructure part of a concrete slab culvert. FORTRAN 95 is a programming language used in the fields of scientific,

numerical, and engineering fields. In this thesis, this language has been used to develop the program for the structural design of reinforced concrete slab culvert deck. The input data for at grade and at fill slab culverts are saved on a note pad in the external file folder which constitute the material properties, geometric features and proposed diameter of reinforcement bars of the slab culvert and its deck in the folder which contains FORTRAN 95 program. The output data is written on the note pad in the external folder based on the format assigned for each output in the folder which contains the design results of

slab deck thickness and area, spacing and length of main, distribution and temperature reinforcement bars. Besides Edge beam design parallel to the traffic is executed and shown in the output result by the developed program. Concrete slab culvert is an important structure used to convey trucks and pedestrian along a road corridor or in one of a range of other situations. This structure is highly constructed in highway road projects in Ethiopia. In this study, a FORTRAN program is developed for the structural design of reinforced concrete slab culvert deck according to the provisions given in AASHTO LRFD

Bridge 2005 Edition. The developed program is expected to assist the structural designers and users to design the superstructure part of a reinforced concrete slab culvert deck efficiently with great accuracy. Both at grade and at fill slab deck thicknesses are computed according to the specification specified in AASHTO LRFD Bridge 2005 Edition. The reinforcement bars are also designed based on the requirements specified in the code. Within the context of this work the program is developed in four steps. The first step is to define and analyze the problem; the second step is to develop an optimal solution and
