Although poor air quality is probably not the hazard that is foremost in peoples' minds as they board planes, it has been a concern for years. Passengers have complained about dry eyes, sore throat, dizziness, headaches, and other symptoms. Flight attendants have repeatedly raised questions about the safety of the air that they breathe. The Airliner Cabin Environment and the Health of Passengers and Crew examines in detail the aircraft environmental control systems, the sources of chemical and biological contaminants in aircraft cabins, and the toxicity and health effects associated with these contaminants. The book provides some recommendations for potential approaches for improving cabin air quality and a surveillance and research program.

This report assesses the operational performance of explosives-detection equipment and hardened unit-loading devices (HULDs) in airports and compares their operational performance to their laboratory performance, with a focus on improving aviation security.

The Manual of Tests and Criteria contains criteria, test methods and

procedures to be used for classification of dangerous goods according

to the provisions of Parts 2 and 3 of the United Nations

Recommendations on the Transport of Dangerous Goods, Model

Regulations, as well as of chemicals presenting physical hazards

according to the Globally Harmonized System of Classification and

Labelling of Chemicals (GHS). As a consequence, it supplements also

national or international regulations which are derived from the

United Nations Recommendations on the Transport of Dangerous Goods or

the GHS. At its ninth session (7 December 2018), the Committee adopted

a set of amendments to the sixth revised edition of the Manual as

amended by Amendment 1. This seventh revised edition takes account of

these amendments. In addition, noting that the work to facilitate the

use of the Manual in the context of the GHS had been completed, the

Committee considered that the reference to the "Recommendations on the

Transport of Dangerous Goods" in the title of the Manual was no longer

appropriate, and decided that from now on, the Manual should be

entitled "Manual of Tests and Criteria".

TRB's Airport Cooperative Research Program (ACRP) Report 104: Defining and Measuring Aircraft Delay and Airport Capacity Thresholds offers guidance to help airports understand, select, calculate, and report measures of delay and capacity.

The report describes common metrics, identifies data sources, recommends metrics based on an airport's needs, and suggests ways to potentially improve metrics.

The major objective of this book was to identify issues related to the introduction of new materials and the effects that advanced materials will have on the durability and technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts that are likely to be incorporated into next generation commercial aircraft and the factors influencing application decisions. Based on these predictions, the committee attempted to identify the design, characterization, monitoring, and maintenance issues that are critical for the introduction of advanced materials and structural concepts into future aircraft.

Advanced Airport Security Operation

Emergency response guidance for aircraft incidents involving dangerous goods

Air Transport and Tourism: Interrelationship, Operations and Strategies is a comprehensive textbook covering all major aspects of air transport from operational and managerial perspectives, as well as exploring the intricate relationship that exists between the air transport and tourism industries. The book introduces and provides in-depth coverage of the complexities of the airline industry and the tourism industry and the ways in which they are connected and impact on each other, for example, the destination-airport-airline nexus, and the roles of air transport and airlines in tourism and vice versa. Emphasis is placed on current and future trends, the impact of COVID-19, sustainability and environmental challenges throughout. Comprehensive coverage of airline operations, strategic management and planning, airport operations and air transport information technology is also provided, offering a practical viewpoint on these vital aspects of the subject. This will be the ideal introductory textbook for students of tourism and hospitality studying courses in aviation and air travel.

Handbook of Checked Baggage Screening - Advanced Airport Security Operation is a practical guide for project managers and designers embarking on hold-baggage screening developments within the airport environment for the first time. The book clearly explains away any uncertainty about the processes and procedures to be used by the various parties involved within the industry and sets out 'best practice' with respect to checked baggage screening design. Valuable lessons can be learned from actual case studies contributed by leading equipment manufacturers on recent 100% hold baggage screening projects. In addition to the all-important security screening of baggage and passengers the book also looks at the following areas associated with airport security, through the use of a detailed structured security check-list evaluation questionnaire. The questionnaire allows airports to assess the state of readiness of their airports and then, using the other chapters, gain an insight regarding which technology will best solve any security gaps. The authors offer a unique perspective through their background and experience. Many of the checked baggage screening procedures and equipment discussed in the book have already been implemented in the UK, with the authors responsible for leading this effort. The

combined experience they can offer to the industry world wide is invaluable.
