Geosynthetics

And Soil

**textiles, grids, linear strips and single filaments to reinforce earth structures such as road embankments, steep slopes and vertically faced soil retaining walls. A considerable number of retaining structures have been successfully constructed using**

the tensile  
reinforcing  
properties of  
"geosynthetics" as  
their primary means  
of stabilization.  
Despite such  
successes sufficient  
uncertainty exists  
concerning the  
performance of  
these new materials,  
their manner of  
interaction with the
