For too long, maintenance has been regarded as a necessary evil rather than a vital contributor to effective mining operations. Today's enlightened mining managers are realizing that a new approach is urgently needed. An integrated, well-understood, companywide strategy is essential to succeed in today's fiercely competitive, high-stakes marketplace. *Equipment Management: Key to Equipment Reliability and Productivity in Mining, Second Edition*, explains how to make that strategy come alive. Essential reading for mining professionals, this book shows how to create an environment and a culture that allow maintenance

to succeed. Author Paul D. Tomlison draws on more than 35 years of direct, worldwide maintenance management consulting experience in the design, implementation, and evaluation of maintenance programs for heavy industry. He explains how the equipment management strategy successfully focuses the efforts of all mining departments on the essential task of delivering consistently reliable production equipment to better guarantee a profitable operation. Tomlison offers valuable insights for developing effective preventive measures, scheduling more planned work, and improving productivity, resulting in higher quality work and less cost while reducing unnecessary downtime and avoiding the consequences of failure.

Leading Change, Advancing Health

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Russia since 1980 recounts the epochal political, economic, and social changes that destroyed the Soviet Union, ushering in a perplexing new order. Two decades after Mikhail Gorbachev initiated his regime-wrecking radical reforms, Russia has reemerged as a superpower. It has survived a hyperdepression, modernized, restored private property and business, adopted a liberal democratic persona, and asserted claims to global leadership. Many in the West perceive these developments as proof of a better globalized tomorrow, while others foresee a new cold war. Globalizers contend that Russia is speedily democratizing, marketizing, and humanizing, creating a regime based on the rule of law and respect for civil rights. Opponents counterclaim that Russia before and during the Soviet period was similarly misrepresented and insist that Medvedev's Russia is just another variation of an authoritarian "Muscovite" model that has prevailed for more than five centuries. The cases for both positions are explored while chronicling events since 1980, and a verdict is rendered in favor of Muscovite continuity. Russia will continue challenging the West until it breaks with its cultural legacy.

The collaborative efforts of Colombia's Department of National Planning (DNP) and the World Bank has produced the National Evaluation System of Public Sector Performance (SYNERGY). Put in place by the Special Division for Evaluation in DNP, this system has been designed and implemented to change the public sector from an inward-looking, process-oriented body (which sometimes restrains economic and social progress) into a more dynamic results-oriented partner of the community and private sector in development. This report explores the critical factors in making SYNERGY a successful evaluation system. Such factors include ways of making it an effective management tool, promoting civil society participation focusing on results for people and leveraging on their energy and resource, defining a constructive learning process for implementation, and providing an enabling environment for a results-oriented public sector.
