What role does oxytocin play in the many changes that occur during pregnancy and breastfeeding designed to make mothers better mothers? How does birth, breastfeeding, and skin-to-skin contact affect oxytocin release? How do birth interventions--epidurals, Cesarean sections, oxytocin infusions, and medications--impact oxytocin release? And how does oxytocin release (or lack of) impact the mother and baby? After many years of researching oxytocin, author, physician, and researcher Dr. Kerstin Uvnas-Moberg presents compelling scientific data that demonstrates the important role oxytocin plays in motherhood. In this book Dr. Uvnas-Moberg describes how oxytocin helps mothers access an inborn female competence that helps them transition to motherhood and give birth more easily, feel better after birth, breastfeed with fewer problems, and establish a good connection with their children. She also explains the impact oxytocin release has on infants--helping them become better at handling stressful situations and impacting their future health. This book provides scientific data to demonstrate that oxytocin plays an important role far beyond stimulation of uterine contractions during birth and milk ejection during breastfeeding, including the following: Oxytocin is a signaling substance in the brain that when released during birth, skin-to-skin contact, and breastfeeding induces important physiological and psychological adaptations in the mother and infant. The way we give birth, handle, feed, and interact with our infants may influence the release of oxytocin and the development of the both short-term and long-term oxytocin-linked effects in both mothers and infants. Medical interventions during birth may influence the release of oxytocin and the development of the oxytocin-linked effects. Anyone working with pregnant and breastfeeding mothers will find this book enlightening and thought-provoking. It will give you evidenced-based information to change practices to protect oxytocin release during birth and in the postpartum period and to better inform new mothers about the role oxytocin plays in pregnancy, birth, and breastfeeding; the importance of natural birth, skin-to-skin contact, and breastfeeding; and the impact of birth interventions."

Pell's equation is part of a central area of algebraic number theory that treats quadratic forms and the structure of the rings of integers in algebraic number fields. It is an ideal topic to lead college students, as well as some talented and motivated high school students, to a better appreciation of the power of mathematical technique. Even at the specific level of quadratic diophantine equations, there are unsolved problems, and the higher degree analogues of Pell's equation, particularly beyond the third, do not appear to have been well studied. In this focused exercise book, the topic is motivated and developed through sections of exercises which will allow the readers to recreate known theory and provide a focus for their algebraic practice. There are several explorations that encourage the reader to embark on their own research. A high school background in mathematics is all that is needed to get into this book, and teachers and others interested in mathematics who do not have (or have forgotten) a background in advanced mathematics may find that it is a suitable vehicle for keeping up an independent interest in the subject.

Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

Seen through a child's perspective, and authored jointly by Nelson Mandela's great-grandchildren and daughter, this amazing story is told as never before to celebrate what would have been Nelson's Mandela 100th birthday.

Throughout human history, wars and violence have often been waged in the name of religions and in the name of diverging religious beliefs and belonging. Ironically, though, all religions in their teachings speak of nonviolence and have in common the promotion of peace and justice, namely the respect of human life and dignity, the institution of human rights, the protection of the poor and vulnerable, the freeing of the oppressed, the active elimination of injustice? It seems therefore, that violence and wars would be antithetical to religions; yet they are so frequently used as their justification. Are we then speaking of different "religions"? "Institutional religions," the ones structured by humans and that are brandished to lead violence and wars, become in fact quite foreign to the essence of the religions as they were established by their founders and that they intend to represent; they actually contribute to their destruction. Wanting to reflect on that point, I embarked, a few years ago, on giving voice to local religious individuals, whom I called "Religious Peacemakers," and who, each by living the essential teachings of their particular faith, contributed by their actions to peace and justice. I wanted to prove that their path, irrespective of their original religion, would be similar, and that their diverse faith, instead of separating them, would on the contrary end up uniting them.

What happened at 10 Rillington Place was so shocking and gruesome that even today everyone over a certain age still remembers the case with a shudder. In 1950, Timothy Evans was hanged for the violent murder of his baby daughter; he was also assumed to have murdered his wife. Then, less than three years later, another tenant, John Christie, was found to have killed at least six women, hiding their bodies in the garden, under floorboards and in a concealed kitchen alcove. Christie followed Evans to the gallows. It seemed unlikely that two murderers were living at 10 Rillington Place, and the evidence that emerged in the Christie case eventually led to Evans receiving a pardon. But there was also circumstantial evidence that Evans had indeed killed his wife and child. Crime student Edna Gammon firmly believes that Evans was guilty. In A House To Remember, she explains why.
