IAS or Indian Administrative Service is considered one of the toughest examination in the country. The examination is conducted by the Union Public Service Commission (UPSC) for the recruitment of officers for the All India Administrative Civil Services. Students who are opting for this examination need to be updated with latest news and trends as the preliminary examination comprises of Objective-Type Questions. The syllabus is vast and one must be able to understand the areas from which question are expected. The new edition of ' IAS (PRE) GENERAL STUDIES PAPER – 1 CHAPTER WISE SOLVED QUESTIONS ' of last 25 years ' with detailed explanation of each and every question. This book indicated the nature and trends of the questions being asked UPSC over the time so that students can rework on their strategies. The book is divided into 5 main parts according to the latest pattern of the syllabus, also it contains 3 IAS (PRE) GENERAL STUDIES PAPER – 1 SOLVED PAPERS [2019-2017] which will give the students some kind of self-evaluation about their speed & time management in their preliminary examination. The answers of solved questions in this book are in a very simple, lucid and grammatically correct language which is very useful and helpful and helpful for the students to understand quickly & easily. This book is like a stepping stones for the students who are aiming to become IAS and serve to the nation. TABLE OF CONTENT IAS (PRE) GENERAL STUDIES PAPER–1 SOLVED PAPER 2019, IAS (PRE) GENERAL STUDIES PAPER–1 SOLVED PAPER 2018, IAS (PRE) GENERAL STUDIES PAPER – 1 SOLVED PAPER 2017, History of India and Indian National Movement, Indian and World Geography, Indian Polity and Governance, Indian Economy General Science & Technology, General Knowledge.

Our personal space is dear to us all. We live our lives in full public view on social media - posting photos of the food we just ate or even expressing intimate feelings for our loved ones - but there are still things we would rather not share with the world. Indeed, it is privacy that sets man apart from the animals who must stick together in the wild for their own safety. But mankind was not born private. Our primitive ancestors too lived in large groups, every member of which knew all there was to know about the others. Privacy evolved over time as man developed technologies to wall himself off, even as he remained part of the society at large. But just as some technologies enhanced privacy, others - such as the printing press or the portable camera - chipped away at it. Every time this happened, man opposed the technology at first but made his peace with it eventually to benefit from the obvious good it could do. We are at a similar crossroads today with data technologies. Aadhaar is one example of the many ways in which we have begun to use data in everything we do. While it has made it far easier to avail of services from the government and private enterprises than ever before, there are those who rightly worry about people's private data being put to ill use - and, worse, without consent. But this anxiety is no different from that which we felt during the teething troubles of every previous technology we adopted. What we really need is a new framework that unlocks the full potential of a data-driven future while still safeguarding what we hold most dear - our privacy. In this pioneering work, technology lawyer Rahul Matthan traces the changing notions of privacy from the earliest times to its evolution through landmark cases in the UK, US and India. In the process, he re-imagines the way we should be thinking about privacy today if we are to take full advantage of modern data technologies, cautioning

against getting so obsessed with their potential harms that we design our laws to prevent us from benefiting from them at all.

What makes Piyush Pandey an extraordinary advertising man, friend, partner and leader of men? How does he manage to exude childlike enthusiasm, and bring such deep commitment to his work? You ' ve seen most of the things that Piyush Pandey has seen in his life.

You ' ve seen cobblers, carpenters, cricketers, trains, villages, towns and cities. What makes Piyush different is the perspective from which he views the same things you ' ve seen, his ability to store all that he sees into some recesses of his brain and then retrieve them at short notice when he needs to. That ability combined with his love, passion and understanding of advertising and of consumers make him the master storyteller that he is. In Pandeymonium, Piyush talks about his influences, right from his childhood in Jaipur and being a Ranji cricketer, to his philosophy, failures and lessons in advertising in particular and life in general. Lucid, inspiring and unputdownable, this memoir gives you an inside peek into the mind and creative genius of the man who defines advertising in India.

Natural gas markets have undergone momentous changes, worldwide. This book updates and expands on the dynamics, performance and forward path of expanding natural gas use in the US and worldwide, including international trade. It brings together major research themes and findings with recent updates and analysis of new trends and developments. It also explores many considerations for natural gas market development, such as the importance of infrastructure, transparent pricing, and institutional capacity. This book is unique in providing background on the full natural gas value chain as well as information and analysis that can foster scenario-building and decision-making. Of particular value are the lessons learned and demonstrated for those countries that aspire to build effective natural gas markets and to expand natural gas development and use.

An Analysis of Policy

Energy Hedging in Asia: Market Structure and Trading Opportunities

DOE/EV.

The Development of a Global LNG Market

Lloyd's List Maritime Asia

This book focuses on the latest developments in the Asia-Pacific community in terms of how deregulation and privatization are bringing more risk to energy companies. In the light of these market changes, interest in energy risk management has grown substantially and is becoming a fiduciary responsibility of energy companies. As energy trading, power exchanges and hedging techniques establish themselves in the oil, power and gas sectors, so then do newer derivatives markets emerge in LNG hedging, weather derivatives and freight hedging. Fusaro and James, as seasoned market practitioners in the region, focus on these market changes and examine the future of Asian energy hedging.

The development of unconventional gas resources, especially shale gas, in China and India, two of the world's fastest-growing economies, warrants close observation because of the potential economic and energy security benefits that successful development could bring to the two nations. An April 2011 assessment of international shale gas resources by the U.S. Energy Information Administration cited technically recoverable shale gas resources (not reserves) in China at 1,275 trillion cubic feet (tcf) and in India at 63 tcf, compared with 1,250 tcf for the United States and Canada combined. China and India have already begun exploring their substantial indigenous shale gas resources, but the question of how well they can replicate the U.S. experience, and over what time period, still looms large. The geological characteristics of shale deposits can vary widely, affecting the potential production profiles. Factors discussed in this report suggest that the pace of development of China's and India's shale gas resources could be significantly slower than the North American experience.

1. The book provides Chapterwise Solved Question of previous 27 Years' 2. Provides questions that are asked in UPSC examination 3. The whole syllabus of the book is divided into 2 main parts; Paper 1 & 2 4. It contains Solved Papers [1995-2021] for IAS (PRE) 5. This book uses simple language for better understanding Antonic De Saint Exupery once said, "A goal without a plan is just a wish". If you are aspiring to become a Civil Servant, make sure to prepare from IAS (PRE) - 27 Years' Chapterwise Topicwise Solved Papers (1995 - 2021). The current edition is designed on an exam oriented structure that facilitates deep coverage on all the topics which have been structured according to the

UPSC Syllabus. This book has been divided into chapters that have been categorized under 2 Sections; Paper 1: General Studies and Paper 2: CSAT. As the title suggests, ample numbers of Questions are provided in a Chapterwise form and Solved Papers, which help in rising up level of preparation. Well detailed solutions are given for each question easing aspirants to understand the concepts. This book acts as a great help in achieving success for the upcoming exam. Table of Concept PAPER 1: History of India and Indian National Movement, Indian & World Geography, Indian Polity and Governance, Indian Economy, General Science and Science & Technology, General Knowledge, PAPER 2: Comprehension, Decision Making and Problem Solving, Logic Reasoning and Analytical Ability, General Mental Ability, Basic Numeracy, Data Interpretation.

The Pricing of Internationally Traded Gas

Is it Likely? If So, When?

Annual Report 2021-22

This book provides a comprehensive overview of Corporate Social Responsibility (CSR) in Indian corporations following the 2013 mandate on corporate spending of profits for CSR. Bringing together authors hailing from diverse walks of life, the book pursues an approach, with real-world case studies and examples that help the reader feel the dynamic pulse of India immediately after the CSR mandate in the Companies Act, 2013. The Act is expected to affect over 16,300 companies with an estimated flow of 10 billion Indian rupees into the economy every year, thus shaking the foundations of business and society and impacting the corporate stakeholder levels. As a result, India is likely to become the birthplace of social, economic, and environmental transformation through investments in CSR! In order to insightfully reflect on this transition, this book has been divided into three parts. The first part discusses the mandate and its implications, while the second focuses on its implementation and the third part provides a view on the way forward. It helps to reveal the various layers of CSR in an emerging economy like India and is expected to spark debate, discussion and research among policy-makers, consultants, academics, practitioners and other stakeholders the world over, which will further expand its contribution to literature and open up new vistas in CSR research. "This is indeed a first of its kind book and marks a watershed in the journey of CSR in India, an extremely important contribution to the body of knowledge in the area of CSR and Corporate Governance in emerging economies by a completely different set of challenges, opportunities and requirements from that of developed economies." Dr. Bhaskar Chakrabarti, Director General & CEO, Indian Institute of Corporate Affairs

This book shares the latest market developments and advances in natural gas demand, supply, transmission, distribution, and pricing, with a special emphasis on the Indian context. Chapters are written by researchers and industry professionals working in the field of gas and energy to provide deeper insights into natural gas market structure, market development, business opportunities and challenges. Topics covered include, natural gas demand-supply, exploration and production policy, downstream regulatory developments, distribution, pipeline, pricing, and taxation policies impacting natural gas market developments in India. The book will be useful for researchers, professionals, and policy makers working in the area of natural gas and related fields.

International Outlook 2016, an updated statistical reference with energy projections, is provided as a service to energy managers both in government and in the private sector. The projections are used by international agencies, federal and state governments, associations, and other planners and decision makers. They are published pursuant to the Department of Energy Organization Act (Public Law 95-91), Section 205(c). The report begins with a review of world trends in energy demand and the major macroeconomic assumptions used in deriving the International Energy Outlook 2016 (IEO2016) projections, along with the major sources of energy projections, which extend through 2040. In addition to the Reference case projections, High Economic Growth and Low Economic Growth cases were developed to consider the effects of higher and lower growth paths for economic activity than are assumed in the IEO2016 also includes a High Oil Price case and, alternatively, a Low Oil Price case. The resulting projections--and the uncertainties associated with international energy projections in general--are discussed in Chapter 1, "World energy demand and economic activity." Projections for energy consumption and production by fuel--petroleum and other liquid fuels, natural gas, and coal--are presented in Chapters 2, 3, and 4, along with reviews of the current status of each fuel on a worldwide basis. Chapter 5 discusses the projections for renewable energy markets--including nuclear power, hydropower, and other marketed renewable energy resources--and presents projections of generating capacity. Chapter 6 presents a discussion of energy used in the buildings sector (residential and commercial). Chapter 7 discusses industrial sector energy use. Chapter 8 includes a detailed look at the world's transportation energy use. Finally, Chapter 9 discusses the outlook for global energy-related carbon dioxide emissions. IEO 2016 focuses exclusively on marketed energy. Non-marketed energy sources, which continue to play an important role in some developing countries, are not included in the estimates. Related Energy & Fuels resources collection can be found here: <https://bookstore.gpo.gov/catalog/science-technology/energy-fuels> More references can be found here: <https://bookstore.gpo.gov/catalog/statistics-data>

Putting a Price on Energy

Examining Potentials and Challenges in China and India

Understanding the Global Energy Crisis

This is a monograph presented at United Service Institution of India

This book presents an enquiry into the interface between nature, economy and society, which is still in its early stages, notwithstanding the commendable progress and advances made in the field of environmental and natural resource economics within the ever-expanding boundaries of economics as a discipline. It further delineates the evolution of an inter-disciplinary framework for analyzing the status, the future goals, mechanisms and policy instruments that can help move towards a more ecologically sustainable, economically beneficial and socially

just future. A pre-requisite for preparing a comprehensive and coherent framework involves unfolding the multiple layers of interconnectedness between the three systems nature, economy and society, each of which has its own internal consistencies as well as externalities. Against this backdrop, the book presents scholarly contributions that focus on four broadly defined building blocks, namely: i) accounting for ecosystems services for life and human well-being; ii) impacts of economic growth on ecosystems; iii) social norms, equity, and governance; and iv) alternative approaches to green and socio-economic systems. The analyses, presented by some of the most eminent national and international scholars, address the major environmental challenges that nations around the world face today and consider which specific policy directions at the international and national level are needed. In particular, the choices India and South Asia now face, as development and environment both need to be addressed adequately, touch on many of these challenges.

An overview of the gas industry and markets in the CIS. This region's strategic importance as one of the largest gas producers has largely been ignored - with the exception of Russia. The book is comprised of 10 country chapters, covering production, decision-making and regulation, domestic market reform, and trade issues.

The Great Reconfiguration

Transportation of Liquefied Natural Gas

We are facing a global energy crisis caused by world population growth, an escalating increase in demand, and continued dependence on fossil-based fuels for generation. It is widely accepted that increases in greenhouse gas concentration levels, if not reversed, will result in major changes to world climate with consequential effects on our society and economy. This is just the kind of intractable problem that Purdue University's Global Policy Research Institute seeks to address in the Purdue Studies in Public Policy series by promoting the engagement between policy makers and experts in fields such as engineering and technology. Major steps forward in the development and use of technology are required. In order to achieve solutions of the required scale and magnitude within a limited timeline, it is essential that engineers be not only technologically-adept but also aware of the wider social and political issues that policy-makers face. Likewise, it is also imperative that policy makers liaise closely with the academic community in order to realize advances. This book is designed to bridge the gap between these two groups, with a particular emphasis on educating the socially-conscious engineers and technologists of the future. In this accessibly-written volume, central issues in global energy are discussed through interdisciplinary dialogue between experts from both North America and Europe. The first section provides an overview of the nature of the global energy crisis approached from historical, political, and sociocultural perspectives. In the second section, expert contributors outline the technology and policy issues facing the development of major conventional and renewable energy sources. The third and final section explores policy and technology challenges and opportunities in the distribution and consumption of energy, in sectors such as transportation and the built environment. The book's epilogue suggests some future scenarios in energy distribution and use.

This Handbook offers a comprehensive overview of the latest research from leading scholars on the international political economy of energy and resources. Highlighting the important conceptual and empirical themes, the chapters study all levels of governance, from global to local, and explore the wide range of issues emerging in a changing political and economic environment.

Multiple Choice Questions on Oil, Gas and Petrochemicals includes over 1500 questions covering the the exploration of oil and gas, refining of oil, natural gas and petrochemical sectors. The book is useful for students pursuing their Bachelor's or Master's Degree in petroleum exploration and for the professionals working in upstream, midstream and downstream sector of oil and gas. The book would also be used by various academic institutions and libraries.

The two volume set CCIS 1030 and 1031 constitutes the refereed proceedings of the Second International Conference on Computational Intelligence, Communications, and Business Analytics, CICBA 2018, held in Kalyani, India, in July 2018. The 76 revised full papers presented in the two volumes were carefully reviewed and selected from 240 submissions. The papers are organized in topical sections on computational intelligence; signal processing and communications; microelectronics, sensors, and intelligent networks; data science & advanced data analytics; intelligent data mining & data warehousing; and computational forensics (privacy and security).

The present situation in the LNG market should be seen as a 'crossroads' for the industry. The LNG industry has not been static over the past 5 decades and has already experienced many changes, but still the model of long-term contracts prevails and the majority of LNG is still bought at oil-indexed gas prices. There have however been considerable changes: an increase in short-term trading of LNG, buyer contractual flexibility and FOB contracts which have led to around a quarter of the LNG is being traded under spot and short-term contracts, with aggregators play a far more significant role. All these factors have influenced project business structures. The industry has now embarked on a period of further change, with 180 bcm of new LNG export capacity (equivalent to more than 50% of LNG trade in 2014) under construction at a time when the assumed rapid LNG demand growth in Asia appears to be slowing. The absorption of this new supply will affect, not only trade-flow patterns, but also pricing dynamics, competition with other gas supply channels and (in the power sector) potentially other fuels. Key to this change is US LNG, with buyers becoming more selective about the price and delivery terms they are ready to accept. Sellers however are facing high costs and are reluctant to abandon a business model in which they have confidence. Oil indexation is under further attack with US LNG selling at HH indexed prices (plus costs), and other sellers and buyers have been pressured to adopt different pricing policies and secure more contractual flexibility. This volume examines the development of the LNG business over the past 50 years and examines how the industry will change over the coming 15 years, faced by unprecedented challenges to its historic business model.
