"This is a book I (David) secretly wanted to write. I have long believed that what is wrong with all psychology textbooks (including those I have written) is their overlong chapters. Few can read a 40-page chapter in a single sitting without their eyes glazing and their mind wandering. So why not organize the discipline into digestible chunks-say forty 15-page chapters rather than fifteen 40-page chapters-that a student could read in a sitting, with a sense of completion? Thus, when McGraw-Hill psychology editor Chris Rogers first suggested that I abbreviate and restructure my 15-chapter, 600-page Social Psychology into a series of crisply written 10-page modules, I said "Eureka!" At last a publisher willing to break convention by packaging the material in a form ideally suited to students' attention spans. By presenting concepts and findings in smaller bites, we also hoped not to overload students' capacities to absorb new information. And, by keeping Exploring Social Psychology slim, we sought to enable instructors to supplement it with other reading"--

The Divine Sting

Why Myers? David Myers has become the world's best-selling introductory psychology author by serving the needs of instructors and students so well. Each Myers textbook offers an impeccable combination of up-to-date research, well-crafted pedagogy, and effective media and supplements. Most of all, each Myers text demonstrates why this author's style works so well for students, with his signature compassionate, companionable voice, and superb judgment about how to communicate the science of psychology and its human impact. Why Modules? This modules-based version of Myers' best-selling, full-length text, Psychology (breaking down that book's 16 chapters into 59 short modules) is yet another example of the author's ability to understand what works in the classroom. It comes from Myers' experiences with students who strongly prefer textbooks divided into briefer segments instead of lengthier chapters, and with instructors who appreciate the flexibility offered by the modular format. Modular organization presents material in smaller segments. Students can easily read any module in a single sitting. Self-standing modules. Instructors can assign modules in their own preferred order. The modules make no assumptions about what students have previously read. Illustrations and key terms are repeated as needed. This modular organization of short, stand-alone text units enhances teacher flexibility. Instead of assigning the entire Sensation and Perception chapter, instructors can assign the module on vision, the module on hearing, and/or the module on the other senses in whatever order they choose. This book asserts that the better one understands the causes of behavior, the better one can apply that knowledge to produce a better world. Harcum begins with a description of the nervous system and continues with chapters on development, perception, internal states, learning, memory, and the ultimate selection of behaviors.

From its beginnings to this remarkably fresh and current new edition, Myers and DeWall's Psychology has found extraordinarily effective ways to involve students with the remarkable research underlying our understanding of human behavior. But while the content and learning support evolves edition after edition, the text itself continues to be shaped by basic goals David Myers established at the outset, including to connect students to high-impact research, to focus on developing critical thinking skills, and to present a multicultural perspective on psychology, so students can see themselves in the context of a wider world. This new edition offers 2100 research citations dated 2015–2020, making these the most up-to-date introductory

psychology course resources available. With so many exciting new findings, and every chapter updated with current new examples and ideas, students will see the importance and value of psychological research, and how psychology can help them make sense of the world around them. The abundant, high quality teaching and learning resources in LaunchPad and in Achieve Read & Practice, carefully matched to the text content, help students succeed, while making life easier and more enjoyable for instructors.

God Is Unimaginably Great

Exploring Psychology in Modules

From his experience as an author and teacher, David Myers has concluded that students digest material more easily when it is presented in smaller chunks. Ask students whether they would prefer a 600-page book to be organized as fifteen 40-page chapters or as forty 15-page chapters and their answers will approach a consensus: students prefer shorter chapters. And research on learning strategies supports this preference: chunked material is more easily digested. Responding to student preference and learning research, Myers has created a modular version of his best-selling brief introductory text, *Exploring Psychology*. *Exploring Psychology, Fifth Edition, in Modules* reorganizes the 15 chapters of *Exploring Psychology, Fifth Edition* into 40 short chapters, or modules. The modular organization offers instructors more freedom to pick and choose from a smorgasbord of topics. Instead of deciding whether to assign the whole chapter on consciousness, instructors can simply assign the module on sleep and dreams, the module on hypnosis, and/or the module on drugs and behavior. Given that each module stands alone and is not dependent upon the content found in other modules, instructors can also choose to cover the modules in any order they please. Featuring the latest research and teaching innovations, Myers' new text reflects the author's continuing drive to discover the most effective way to communicate psychology's major ideas to an uninitiated audience. Note: *Exploring Psychology, Fifth Edition, in Modules* is now available (saleable) in two different saleable versions: a. A hardcover, spiralbound text [similar in structure to the spiralbound Myers in Modules] b. A perfectbound paperback text The features that have made David Myers' introductory psychology textbooks such phenomenal successes (compelling narrative, critical thinking theme, superior design) are all present in *Exploring Psychology, Fifth Edition, in Modules*. The way those hallmark features are presented is different. This is NOT a brief version of *Psychology: Myers in Modules, Sixth Edition*. Rather, this new text is a Modularized version of *Exploring Psychology, Fifth Edition*. Therefore, it enjoys all of the hallmark features of *Exploring Psychology, Fifth Edition*: SQ3R pedagogical system, terrific writing, and briefer coverage of key topics. It is, in fact, the same writing/content as can be found in *Exploring Psychology, Fifth Edition*, just with a different organization.

David Myers' new partnership with coauthor C. Nathan DeWall matches two dedicated educators and scholars, each passionate about teaching psychological science through writing and interactive media. With this new edition of the #1 bestselling *Psychology*, Myers and DeWall take full advantage of what an integrated text/media learning combination can do. New features move students from reading the chapter to actively learning online: *How Would You Know* puts students in the role of scientific researcher and includes tutorials on key research design principles; *Assess Your Strengths* self-tests help students learn a little more about themselves, and include tips about nurturing key strengths. These and other innovations rest on the same foundations that have always distinguished a new David Myers edition—exhaustive updating (hundreds of new citations), captivating writing, and the merging of rigorous science with a broad human perspective that engages both the mind and heart.

Are beliefs in God and in the soul merely relics of pre-scientific superstition? After all, in the twentieth and twenty-first centuries the so-called age of science we know that science can be proven by its fruits: it helped us split the atom and put men on the moon. Religious faith, on the other hand, couldn't accomplish these feats. This conflict leaves modern-day Christians challenged by materialist atheists who claim that faith in God has been discredited by modern physics and psychology. *The Divine Sting* answers their challenge. Contrary to what most Christians think, belief in God and the soul need not remain matters of religious faith. In fact, it is the atheists themselves who ignore Einstein's shocking revelation about modern science that the physical universe, including the human body and its brain, have never been observed. We have rather only observed mental effects whose source we can only guess at. Atheists' naive claims about scientific observation are themselves nothing less than an article of anti-scientific faith. By integrating facts traditionally segregated into categories of philosophy versus theology versus modern science, *The Divine Sting* will assist you in discovering for yourself how to convert faith in God and belief in the soul into solid, impregnable, and justifiably certain science.

Radically change the way students learn from texts, extending beyond comprehension to critical reasoning and problem solving. Comprehension proposes a new, comprehensive model of reading instruction that goes beyond teaching skills to fostering engagement and motivation. Using a structured, three-pronged approach—skill, will, and thrill—students learn to experience reading as a purposeful act and embrace struggle as a natural part of the reading process. Instruction occurs in three phases: · Skill. Holistically developing skills and strategies necessary for students to comprehend text. · Will. Creating the mindsets,

motivations, and habits necessary to engage fully with texts. · Thrill. Fostering the thrill of comprehension and using the knowledge for something else. One cannot watch or read about the news these days without hearing about the models for COVID-19 or the testing that must occur to approve vaccines or treatments for the disease. The purpose of *Mathematical Modeling in the Age of a Pandemic* is to shed some light on the meaning and interpretations of many of the types of models that are or might be used in the presentation of analysis. Understanding the concepts presented is essential in the entire modeling process of a pandemic. From the virus itself and its infectious rates and deaths rates to explain the process for testing a vaccine or eventually a cure, the author builds, presents, and shows model testing. This book is an attempt, based on available data, to add some validity to the models developed and used, showing how close to reality the models are to predicting "results" from previous pandemics such as the Spanish flu in 1918 and more recently the Hong Kong flu. Then the author applies those same models to Italy, New York City, and the United States as a whole. Modeling is a process. It is essential to understand that there are many assumptions that go into the modeling of each type of model. The assumptions influence the interpretation of the results. Regardless of the modeling approach the results generally indicate approximately the same results. This book reveals how these interesting results are obtained.

This text includes over 40 easy-to-follow modules related to women and leadership development crafted by experienced leadership educators and practitioners. Each module includes learning objectives, detailed instructions, and ideas for adapting the module to diverse learning spaces and audiences. Here are but a few of the topics that are addressed in the modules: • How do we make explicit the complexities of power in leadership and in the stories we tell ourselves and gender in leadership? • How can we interrogate and deconstruct dominant narratives and invite intersectionality? Whose voices are silenced in content and process? • What practices build leadership efficacy and habits of critical self-reflection? • What are the effects of prejudice and discrimination in leadership? • How are learning and leadership both individual and collective processes? • How do we develop leadership consciousness and maintain hope in the face of the long arc of structural change? This text is a detailed resource for anyone interested in leadership education, whether through a full-length course, a weekend workshop, or a one-time topical session.
