Introducing fold-by-number, a revolutionary origami new concept in paper folding. Created by the founder of Tarō's Origami Studio, Origami City marries the joy of paper folding with the foolproof appeal of paint-by-number with the imaginative play of LEGO or Playmobils. This ingenious book is an all-in-one kit for a complete origami metropolis: 75 realistic pieces to fold with step-by-step instructions; an illustrated paper play mat; and over 100 sheets of preprinted origami paper with numbers and lines for folding. The models—houses, office buildings, cars, emergency and construction vehicles, an airport, even dogs and squirrels to run in the parks—are meticulously detailed, illustrated by Brooklyn-based artist Simon Arizpe. For ages 7 and up.

Flying the Airbus A380

**Originally published:** Tokyo: Shubunsha, 2007.

The **light-duty vehicle fleet** is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

**Motoring the Future: VW and Toyota Vying for Pole Position** deals with the challenges facing the global car industry today, analyzing Volkswagen and Toyota, with some surprising results. The book provides insights into each car manufacturer's corporate culture, products, production, leadership and technologies, as well as some thoughts on the future of the car. These two opponents vying for pole position could hardly be more different: Toyota, with a focus on manufacturing excellence, is dominant in its home market, the USA and south-east Asia, whereas VW, with its strategy of product excellence, leads in western Europe, Brazil and China. Industrial dominance will be important to them in the future, with both companies needing to master the next steps in product and manufacturing excellence. The race is by no means over, offering a deep insight into the challenges for carmakers moving away from fossil fueled combustion to alternative energy vehicles for the mass market. Major players are trying to answer the key question: How will the car of the future look? VW and Toyota now need to keep ambitious competitors at bay. Timing is everything: US manufacturers are focused on their own revival; Korean and Chinese players are progressing surprisingly fast. However, it looks like the battle for pole position will likely remain between Toyota and VW. *Motoring the Future* offers updates on Volkswagen's and Toyota's next generation vehicles, both plotting a new course into the future. In this thoroughly revised edition the book, new facts and material have extended the scope to American manufacturers and to new competitors from the Far East.

*Every 7 minutes, an A380 takes off or lands somewhere in the world...The Airbus was initially designed and developed in order to provide a contender to the Boeing's growing monopoly of the skies in the biggest large-aircraft market in the world. Ambitious in design, the undertaking seemed mammoth. Yet scores of aviation engineers and pilots worked to get the design off the ground and the Airbus in our skies. This double-decker, wide-body, 4 engine jet airliner promised to redefine expectations when it came to commercial flight. Five years on from its launch, Graham Simons provides us with this, an impressively illustrated narrative history of the craft, its achievements, and the legacy it looks set to provide to a new generation of aviation engineers, enthusiasts and passengers. Operated by airlines such as Emirates, Singapore Airlines, Qantas and Lufthansa, the story of the A380 could be said to represent the story of modern-day travel itself, characterised by major technological advances across the world that constantly push the boundaries of expectation. Sure to appeal broadly across the market, this is very much a commemorative volume, preserving the history of this iconic craft in words and images.*

*Aerodynamics has never been more central to the development of cars, commercial vehicles, motorbikes, trains and human-powered vehicles, driven by the need for efficiency, reducing carbon dioxide emissions, reducing fuel consumption, increasing range and alleviating problems associated with traffic congestion. Reducing vehicle weight makes it more challenging to ensure that they are stable and handle well over a wide range of environmental conditions. Lighter structures are also more vulnerable to aerodynamically induced vibration. Alongside this, customers demand an environment that is quiet, comfortable and maintains a consistent temperature in all weathers. These aims must be met by designing vehicles that engage customers emotionally, promoting the brand values of manufacturers and operators. This can only be done by collaboration between designers and aerodynamicists. Examine the latest developments in vehicle aerodynamic development Explore opportunities to network and share experiences around different areas Focus on future challenges and the engineering knowledge and technology required to resolve them Discuss other areas of development including handling and stability, tyre aerodynamics and modelling, aeroustics and fluid structure interaction*

In Oshaantu, a place where women are the backbone of the home but are expected to submit to patriarchal dominance, Mee Ali is happily married. Her friend, Kauna, however, suffers at the hands of an abusive husband. When he is found dead at home, many of the villagers suspect her of poisoning him. Backtracking from that time, the novel, with its universal appeal, reveals the value of friendships, some of which are based on tradition while others grow out of strength of character, respect, and love.

When the first Corvette was introduced to the public through the travelling caravan known as Motorama, everyone knew there was something special about it. Each subsequent model continued to strengthen that position. But how do you upgrade America's favorite sports car? Make it a special edition! Special edition Corvettes are the tip of the spear when it comes to the American auto manufacturers special models. Luminous cars such as the 1967 L88 convertible, 1969 aluminum bodi ZL1, and 2015 Z06 #001 have all commanded a million dollars or more. Modern dealer-tuned cars from Lingenfelter, Calloway, and Hennessey have carried the tradition of making a great Corvette even better. Extremely low mileage on 1978 Pace Cars indicate that people have thought of these cars as investments for nearly 40 years. Keith Cornett of Corvetteblogger.com compiles a murderer's row of special-edition Corvettes in this first-ever compilation on the subject. This book is an encyclopedia of information, as you will learn about some of the rarest Corvettes on the planet. It will serve as a guide if you're looking to add one of these special machines to your collection. Everything you've ever wanted to learn about collectible Corvettes is in Corvette Special Editions.

A rigorously researched and definitive book - the first major re-appraisal of artist engineer Ettore Bugatti and his extraordinary cars to appear since 1963. He built only 7,800 cars between 1910 and 1939, but these are much sought-after today. This book charts the beginnings of the famous marque, the cars that brought it fame from the exquisite Type 35 to the massive Royale, only six of which were ever built, and chronicles the make's revival which began in Italy in 1988. Comprehensively illustrated with over 300 photographs, this book is a unique source of reference and winner of the Society of Automotive Historians' Cugnot Award.

Aerodynamics of Road Vehicles details the aerodynamics of passenger cars, commercial vehicles, sports cars, and race cars; their external flow field; as well as their internal flow field. The book, after giving an introduction to automobile aerodynamics and some fundamentals of fluid mechanics, covers topics such as the performance and aerodynamics of different kinds of vehicles, as well as test techniques for their aerodynamics. The book also covers other concepts related to automobiles such as cooling systems and ventilations for vehicles. The text is recommended for mechanical engineers and physicists in the automobile industry who would like to understand more about aerodynamics of motor vehicles and its importance on the field of road safety and automobile production.

With glorious photography and sharp writing, Never Stop Driving presents the case for the mental and social benefits of driving and engaging with automobiles. It also shows you—from dreaming about a car to living with it—how to jump in and get the most from your machine. There's never been a better time to go for a drive. As a nation, we are chronically overstressed, overworked, and not sleeping enough. Worse yet, our digital devices are taking ever increasing chunks of what remaining free time we do have. Activities that force us to engage with ourselves and the environment around us are needed more than ever. Might I suggest a spin in a four-wheeled escape pod? The car—the act of driving, repairing, maintaining—drives out distraction and demands we be "present." Making the car a pursuit invites not just the freedom of the road, but the potential to connect with thousands of like-minded individuals as well as the pleasure of simply caring for the machine. Further, there's the thrill of commanding an object that represents a high point of human ingenuity and design. Cars invite passion. The first step is embracing the itch and acting on it. Learn how to choose your perfect weekend car, hunt for it, and make the deal. Then, find peace in the wrenches with tips on taking the plunge into maintaining your ride, including how your car can be an opportunity to tear your kids away from their screens and strengthen your bond with them. Next, explore the joy of driving, from scenic byways to taking your car to its performance limit. You'll also tour the various highlights of the driving life, like how to become an automotive archaeologist, the possibilities for those short on cash but high for adventure, the car as a social gathering point, and what the future with autonomous cars means for those who love to drive. Never Stop Driving shines some light on why we find these machines so captivating, offering some inspiration and validation, and finally inviting those who are curious but haven't made the leap to get in the car. Let's roll.

Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption—the amount of fuel consumed in a given driving distance—because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.

**Take a truly technical tour of one of the most remarkable construction projects of 2009 in all its architectural glory. British broadcaster, writer and toy 'nut-case' James May lived a childhood dream by designing, building and sleeping in a quite stunning full-size house inspired by and completely made from LEGO, one of the world's most favourite toys and a design icon in its own right. James May's Lego House provides a complete photographic record of this stunning creation which now proudly holds the Guinness World Record for the largest free-standing LEGO structure. However, this is not a simple recreation of a childhood vision of a house but is fully informed by the 'simple complexity' of LEGO's design philosophy centring around the basic 'eighter' brick. Indeed, 3.3 million LEGO elements were used exclusively to create the two-storey house and its incredible fittings that range from a washing machine, furniture, cat and mouse, bed and bedding and fully functioning shower and toilet.**

In the wake of World War II, the U.S. automobile industry was fully unprepared to meet the growing demands of the public, for whom they had not made any cars for years. In stepped Preston Tucker, a salesman extraordinaire who announced the building of a revolutionary new car: the Tucker '48, the first car in almost a decade to be built fresh from the ground up. Tucker's car, which would include ingenious advances in design and engineering that other car companies could not match, captured the interest of the public, and automakers in Detroit took notice. Here, author Steve Lehto tackles Tucker's amazing story, relying on a huge trove of documents that has been used by no other writer to date. It is the first comprehensive, authoritative account of Tucker's magnificent car and his battles with the government. And in this book, Lehto finally answers the question automobile aficionados have wondered about for decades: exactly how and why the production of such an innovative car was killed.

Research Paper (undergraduate) from the year 2016 in the subject Business economics - Industrial Management, grade: 3.7 (93%), California State University, Fullerton, language: English, abstract: The paper analysis the automotive industry in general as well as the relative position of the Volkswagen AG. Furthermore, VW's competitors are assessed and recommendations for actions are formulated. In the beginning the creation of the automobile seemed less of a need and more of a luxury. The first car took to the road in France in 1768 – but Cugnot's novel idea did not trigger the beginning of the car industry. After Henry Ford's model made its debut, owning a car was a symbol of status, because it could only be afforded by the wealthy. Once the process of Henry Ford's mass production was introduced, cars could be afforded by a wider dynamic of people, and ownership became an affordable growing trend. The production of automobiles was a great help to the economy for the different metal parts of the car. The increase in the need of supplies and other parts of the car including the battery, head lights, paint, and interior upholstery, were the driving forces for new businesses to thrive.
