Doing Development Research is a comprehensive introduction to research in development studies that provides thorough training for anyone carrying out research in developing countries. It brings together experts with extensive experience of overseas research, presenting an interdisciplinary guide to the core methodologies. Informed by years of research experience, this book draws together many strands of action research and participatory methods, demonstrating their diverse applications and showing how they interrelate. Doing Development Research is the essential A-Z of

Illustrated by case studies from both smaller nations, such as Carriacou, Barbados and St Lucia and larger countries, including Cuba, Mexico and Jamaica, this volume brings together leading writers concerned with environmental planning in the Caribbean to provide an interdisciplinary contemporary critical overview. They argue that context is central to the practice of environmental planning in this region. Rather than focusing on a deterministic colonial geography and history, this volume proposes that, whilst a wide range of foreign planning influences can be felt in different contexts, environmental planning emerges in specific settings, through the fluid interaction between local and global relations of power. Thus, a number of chapters explore the

include participatory planning, urban planning, physical development planning, pest management, sustainable development, water pollution, conservation and ecotourism.

This comprehensive volume comprises some of the best scholarship on sustainable tourism in recent years, demonstrating the rich body of past research that provides a fertile and critical ground for studies on the Sustainable Development Goals (SDGs) by tourism geographers and other social scientists in the future. Since the turn of the 1990s many international development and policy-making organisations have perceived the tourism industry, with its local and regional connections, as a high-potential tool for putting sustainable

Read Book Participatory
Planning In The Caribbean
Lessons From Practice Soas
Studies In Development
Geography

development into practice. The capacity of tourism to work for sustainable development was highlighted in relation to the United Nations' SDGs, which were adopted in 2015. The SDGs define the agenda for global development to 2030 by addressing pertinent challenges such as poverty, inequality, climate change, environmental degradation, and peace and justice. Tourism geographers and allied disciplines have held strong and long-term interest in sustainability issues, and their chapters in this collection contribute significantly to this emerging and highly policy-relevant research field. This book was originally published as an online special issue of the journal *Tourism Geographies*.

The tropical estuarine systems of Mexico and Central America are an important part of the region's coastlines; for example Mexico alone possesses more than 770 thousand hectares of mangroves, as well as the largest estuarine mangrove complex on the American Pacific (Marismas Nacionales), yet is one of the poorest studied areas in the world. This is the first book that deals extensively with fisheries management issues in this region from physical-chemistry, ecological and socioeconomic views, providing an understanding on the function and the effects of human activities on these areas, with works undertaken by local scientist.

work by governments, aid agencies and non-government organisations ignores the fact that environmental quality matters to the poor. There are also indications that some environmental work is pushing 'people-out' protection methodologies. Yet recently, an extensive range of project, programme and policy level activities has focused attention on the important links between poverty and the environment, and the benefit of entrenching these links in policy-making processes at all levels. The role that politics plays in all of this is of overriding importance. This volume is the first to address the role of politics in environmental issues that matter to

both poverty reduction and the environment.

Until recently, planning and development in the Caribbean have been 'top-down', 'centre-out' and 'expert-led'. For a few years now, though, the region has bowed to the global trend and has experimented with participatory planning methods. In this volume, a range of leading experts drawn from the Caribbean, UK and US review the current achievements and future prospects for genuinely participative planning in the Caribbean region at the beginning of the 21st Century.

practical examples of its use. In particular, it describes theoretical and methodological aspects of participatory research and planning, as well as the implementation of participatory processes in fields such as transport planning, cultural heritage management, environmental planning and post-earthquake recovery. Further, it compares participatory planning experiences from different territorial levels - from the macro-regional, e.g. Southeastern Europe, Mediterranean or European metropolitan regions, to national, regional and local

levels. The book will help researchers, planners, public administration officials, decision-makers and the general public to understand the advantages, disadvantages and constraints of participatory planning and research. Using various examples, it will guide readers through the theory of participatory planning and research, its methods, and different perspectives on how to use it in practice.

After the collapse of the Soviet bloc in 1989, Fidel Castro announced the beginning of a Special Period for Cuba. During this time, the Cuban

conservation, economic growth and social welfare. This book identifies the dilemmas of managing conservation and development in coastal areas. It offers important information on the management, conservation and social implications of coastal resources. The authors present a variety of participatory methods and techniques that can be used to show the success or otherwise of the different uses and how they affect the users. Their interdisciplinary analysis draws upon
