While such knowledge and skills are essential, more is required for children to become literate, fluent readers who understand what they read. In short, the goal of reading is comprehension. This book sets out the obstacles to reading comprehension and explains Filez what can be done to help children overcome them. It is an important and timely contribution to securing high-quality teaching of the range of attributes children need to become fully-fledged readers." Sir Jim Ross, CBE "The studies by Professors Charles Hulme and Maggie Snowling and their team over two decades based around the Reading Intervention Programme are the most sustained, comprehensive and rigorous research series on reading yet conducted in the UK. Their increasing focus on children who experience the most dif Ficulty in reading is exactly where attention should be directed. This volume summarises the team's achievements to date, and is most eagerly awaited." Greg Brooks, Emeritus Professor of Education, University of Sheffield. Member of European High Level Group of Experts on Literacy "Developing Reading Comprehension presents a landmark study from the top research team in the UK on how to improve reading comprehension. The ultimate aim of reading is not the process but to understand what we read and comprehension can take place at many different levels. There has been an increasing emphasis on the importance of reading comprehension in recent years but despite this there is very little writing on this vital topic accessible to trainee and practicing teachers. The Handbook of Reading Comprehension presents an overview of recent findings on reading comprehension and comprehension problems in children. It provides a detailed examination of the characteristics of children who have reading comprehension difficulties, and examines ways in which comprehension can be supported and improved. It is accessibly written for students and professionals with no previous background in the psychology of reading or reading problems. This indispensable handbook asks the question ' what is comprehension?' The authors consider comprehension of different units of language: understanding single words, sentences, and connected prose and outline what readers (and listeners) have to do to successfully understand an extended text. This book also considers comprehension for different purposes, in particular reading for pleasure and reading to learn and explores how reader characteristics such as interest and motivation can influence the comprehension process. Different skills contribute to successful reading comprehension. These include word reading ability, vocabulary knowledge, syntactic skills, memory, and discourse level skills such as the ability to make inferences, knowledge about text structure, and metacognitive skills. The authors discuss how each one contributes to the development of reading comprehension skill and how the development of these skills (or their precursors) in pre-readers, provides the foundation for reading comprehension development. Areas covered include: Word reading and comprehension Development of comprehension skills Comprehension difficulties Assessment Teaching for improvement Throughout the text successful experimental and classroom based interventions will be highlighted, practical tips for teachers and summary boxes detailing key points and explaining technical terms will be included in each chapter
