acts or objects  
which are away  
from the end of

In considering  
the phenomena  
of sexual  
selection in a  
previous  
volume,[2] it  
was found that

there are four or five main factors in the constitution of beauty in so far as beauty determines sexual selection. Erotic symbolism is founded on the factor of

individual taste  
in beauty; it  
arises as a  
specialized  
development of  
that factor, but  
it is,  
nevertheless,  
incorrect to  
merge it in  
sexual selection.  
The attractive

The term "sexual  
instinct" may be  
said to cover the  
whole of the  
neuropsychic  
phenomena of  
reproduction which  
man shares with the  
lower animals. It is  
true that much  
discussion has  
taken place

concerning the proper use of the term "instinct," and some definitions of instinctive action would appear to exclude the essential mechanism of the process whereby sexual reproduction is assured. Such definitions scarcely seem legitimate,

and are certainly  
unfortunate.

Herbert Spencer's  
definition of instinct  
as "compound  
reflex action" is  
sufficiently clear  
and definite for  
ordinary use. A  
fairly satisfactory  
definition of instinct  
is that supplied by  
Dr. and Mrs.  
Peckham in the

course of their  
study On the  
Instincts and Habits  
of Solitary Wasps.  
"Under the term  
'instinct,'" they say,  
"we place all  
complex acts which  
are performed  
previous to  
experience and in a  
similar manner by  
all members of the  
same sex and race,

leaving out as non-essential, at this time, the question of whether they are or are not accompanied by consciousness."

This definition is quoted with approval by Lloyd Morgan, who modifies and further elaborates it (Animal Behavior,

1900, p. 21). "The distinction between instinctive and reflex behavior," he remarks, "turns in large degree on their relative complexity," and instinctive behavior, he concludes, may be said to comprise "those complex groups of co-ordinated acts

the members of the same more or less restricted group of animals; but which are subject to variation, and to subsequent modification under the guidance of experience." Such a definition clearly justifies us in speaking of a "sexual instinct." It

may be added that  
the various  
questions involved  
in the definition of  
the sexual instinct  
have been fully  
discussed by Moll  
in the early  
sections of his  
Untersuchungen  
über die Libido  
Sexualis. Of recent  
years there has  
been a tendency to

avoid the use of the term "instinct," or, at all events, to refrain from attaching any serious scientific sense to it. Loeb's influence has especially given force to this tendency. Thus, while Pi é ron, in an interesting discussion of the

A man's sexual nature, like all else that is most essential in him, is rooted in a soil that was formed very long before his birth. In this, as in every other respect, he draws the elements of

his life from his ancestors, however new the recombination may be and however greatly it may be modified by subsequent conditions. A man's destiny stands not in the future but in the past. That, rightly considered, is the most vital of all vital facts. Every child thus has a right to choose his own ancestors. Naturally he
